Handwriting is unique to each individual. Although some people's handwriting may have similar styles and characteristics in common, significant others have people learned to write by copying letters and words that tend to take on individual styles with age. Thus, as a person ages, their handwriting will have additional changes.

Generally, one cannot determine the age or sex of a suspect or whether they are left-handed or right-handed from a normal writing sample. Certain types of characters and combinations of writing style and detailed examination of an original document can give hints at some of these characteristics.

In handwriting analysis, one should look for variations in the slopes, angles, alignments, and spacing of letters.
