Embedded Linux Development Using Eclipse:

Embedded Linux Development Using Eclipse Doug Abbott, 2008-11-13 The Eclipse environment solves the problem of having to maintain your own Integrated Development Environment IDE which is time consuming and costly Embedded tools can also be easily integrated into Eclipse The C C CDT is ideal for the embedded community with more than 70% of embedded developers using this language to write embedded code Eclipse simplifies embedded system development and then eases its integration into larger platforms and frameworks In this book Doug Abbott examines Eclipse an IDE which can be vital in saving money and time in the design and development of an embedded system Eclipse was created by IBM in 2001 and then became an open source project in 2004 Since then it has become the de facto IDE for embedded developers Virtually all of the major Linux vendors have adopted this platform including MontaVista LynuxWorks and Wind River Details the Eclipse Integrated Development Environment IDE essential to streamlining your embedded development process Overview of the latest C C Developer s Toolkit CDT Includes case studies of Eclipse use including Monta Vista LynuxWorks and Wind River *Handbook of Research on Open Source Software: Technological, Economic, and Social Perspectives* St. Amant, Kirk, Still, Brian, 2007-04-30 This handbook of research is one of the few texts to combine Open Source Software OSS in public and private sector activities into a single reference source It examines how the use of OSS affects practices in society business government education and law *Computational Technologies* Petr N. Vabishchevich, 2014-12-11 In this book we describe the basic elements of present computational technologies that use the algorithmic languages C C The emphasis is on GNU compilers and libraries FOSS for the solution of computational mathematics problems and visualization of the obtained data At the beginning a brief introduction to C is given with emphasis on its easy use in scientific and engineering computations We describe the basic elements of the language such as variables data types executable statements functions arrays pointers dynamic memory and file management After that we present some observations on the C programming language We discuss the issues of program compiling linking and debugging A quick guide to Eclipse is also presented in the book The main features for editing compiling debugging and application assembling are considered As examples we solve the standard problems of computational mathematics operations with vectors and matrices linear algebra problems solution of nonlinear equations numerical differentiation and integration interpolation initial value problems for ODEs and so on Finally basic features of computational technologies are illustrated with model problems All programs are implemented in C C with using the GSL library Gnuplot is employed to visualize the results of computations **Embedded Linux Systems with the Yocto Project** Rudolf J. Building Embedded Linux Systems Karim Yaghmour, 2003

Linux is being adopted by an increasing number of embedded systems developers who have been won over by its sophisticated scheduling and networking, its cost free license, its open development model and the support offered by rich and powerful programming tools. While there is a great deal of hype surrounding the use of Linux in embedded systems, there is not a lot of practical information. *Building Embedded Linux Systems* is the first in depth hard core guide to putting together an embedded system based on the Linux kernel. This indispensable book features arcane and previously undocumented procedures for:

- Building your own GNU development toolchain
- Using an efficient embedded development framework
- Selecting, configuring, building and installing a target specific kernel
- Creating a complete target root filesystem
- Setting up manipulating and using solid state storage devices
- Installing and configuring a bootloader for the target
- Cross compiling a slew of utilities and packages
- Debugging your embedded system using a plethora of tools and techniques

Details are provided for various target architectures and hardware configurations including a thorough review of Linux's support for embedded hardware. All explanations rely on the use of open source and free software packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, this book greatly simplifies the task of keeping complete control over one's embedded operating system, whether it be for technical or sound financial reasons.

Author: Karim Yaghmour, a well known designer and speaker who is responsible for the Linux Trace Toolkit.

starts by discussing the strengths and weaknesses of Linux as an embedded operating system. Licensing issues are included followed by a discussion of the basics of building embedded Linux systems. The configuration setup and use of over forty different open source and free software packages commonly used in embedded Linux systems are also covered.

- uClibc
- BusyBox
- U-Boot
- OpenSSH
- httplib
- ttftp
- strace
- and gdb

are among the packages discussed.
