UNITS

The SI units and the foot-pounds are both the metric system of units and the U.S. Customary System. Both the SI and U.S. systems of units have been well established worldwide. Therefore, you must interpret the given data correctly from the given units. Thus:

The pound-force is the force which produces an acceleration on a mass of 32.174 lbm. Thus, 1 lb_f = 32.174 lbm-ft/sec². The expression 32.174 lbm-ft/sec² is designated as *g*, and is used in the expression involving both mass and force expressed in pounds. For instance, involving Newton's second law, the equation could be written $F = ma$, where F is in lb_f, m is in lbm, and a is in ft/sec².

Similar expressions involve other quantities. Kinetic Energy, $KE = mv^2/2$, with KE in ft-lb, Kinetic Energy, $KE = mv^2/2$, with m in lbm and v in ft/sec, $v = 2.045$, with m in lbm. Specific Weight, $\gamma = \rho g$, with ρ in lbm/ft³. Heat flow, $q = \rho c_p \Delta T$, with ρ in lbm/ft³, c_p in ft-lb/lbm-°F, and ΔT in °F. In all these examples, *g*, should be regarded as a unit conversion factor. It is frequently an entire expression in engineering equations. Therefore, it can be regarded as a constant unit of unity.

Now, for the conversion factor *g*, (32.174 lbm/ft²) should not be confused with the local acceleration of gravity, *g*, which has different units (m/s² or ft/sec²) and may be either the standard value of 9.807 m/s² or 32.174 ft/sec² or some other local value.

If the problem is presented in U.S. Units, it may be convenient to use the conversion *g* in the equation to have a constant unit of unity.

WEIGHT CONVERSIONS

The standard gas constant, designated as *R*, is the ratio between various pressure-volume, temperature, and quantity of matter of a fixed gas. When the standard constant, *R*, is divided by the molecular weight of the gas, the result, often designated as *R*, has units of energy per unit mass (ft-lb/lbm-°F) and becomes characteristic of the particular gas. Table (Engineering Property Tables) Appendix, offers the specific *R* values for the standard gas constant, *R*.
