Elements of Programming Alexander Stepanov,Paul McJones,2019-06-17 Elements of Programming provides a different understanding of programming than is presented elsewhere Its major premise is that practical programming like other areas of science and engineering must be based on a solid mathematical foundation This book shows that algorithms implemented in a real programming language such as C can operate in the most general mathematical setting For example the fast exponentiation algorithm is defined to work with any associative operation Using abstract algorithms leads to efficient reliable secure and economical software

Kernighan,P. J. Plauger,1974 [The French School of Programming](#) Bertrand Meyer,2024-04-29 The French School of Programming is a collection of insightful discussions of programming and software engineering topics by some of the most

prestigious names of French computer science. The authors include several of the originators of such widely acclaimed inventions as abstract interpretation, the Caml OCaml and Eiffel programming languages, the Coq proof assistant, agents, and modern testing techniques. The book is divided into four parts: Software Engineering, A Programming Language Mechanisms and Type Systems, B Theory, C and Language Design and Programming Methodology, D. They are preceded by a Foreword by Bertrand Meyer, the editor of the volume, a Preface by Jim Woodcock providing an outsider's appraisal of the French school's contribution, and an overview chapter by Gérard Berry recalling his own intellectual journey. Chapter 2 by Marie-Claude Gaudel presents a 30-year perspective on the evolution of testing, starting with her own seminal work. In chapter 3, Michel Raynal covers distributed computing with an emphasis on simplicity. Chapter 4 by Jean-Marc Jézouel, former director of IRISA, presents the evolution of modeling from CASE tools to SLE and Machine Learning. Chapter 5 by Joëlle Coutaz is a comprehensive review of the evolution of Human-Computer Interaction. In part B, chapter 6 by Jean-Pierre Briot describes the sequence of abstractions that led to the concept of agent. Chapter 7 by Pierre-Louis Curien is a personal account of a journey through fundamental concepts of semantics, syntax, and types. In chapter 8, Thierry Coquand presents some remarks on dependent type theory. Part C begins with Patrick Cousot's personal historical perspective on his well-known creation, abstract interpretation, in chapter 9. Chapter 10 by Jean-Jacques Lévy is devoted to tracking redexes in the Lambda Calculus. The final chapter of that part, chapter 11 by Jean-Pierre Jouannaud, presents advances in rewriting systems, specifically the confluence of terminating rewriting computations. Part D contains two longer contributions. Chapter 12 is a review by Giuseppe Castagna of a broad range of programming topics relying on union, intersection, and negation types. In the final chapter, Bertrand Meyer covers ten choices in language design for object-oriented programming, distinguishing between right and wrong resolutions of these issues and explaining the rationale behind Eiffel's decisions. This book will be of special interest to anyone with an interest in modern views of programming on such topics as programming language design, the relationship between programming and type theory, object-oriented principles, distributed systems, testing techniques, rewriting systems, human-computer interaction, software verification, and in the insights of a brilliant group of innovators in the field.
