

Shell Darina Grease R 2

Shell Darina Grease R 2, based on an inorganic non-soap thickener and a specially selected base oil, will provide satisfactory lubrication beyond the temperature limitations of lithium based greases.

The base oil component in Shell Darina Grease R 2 is a high quality, solvent refined, high viscosity mineral oil with excellent oxidation and evaporation resistance. Oxidation stability is also improved by the addition of a special high temperature oxidation inhibitor.

Applications

Recommended for use in bearings operating in the temperature range 150°C to 250°C.

Shell Darina Grease R 2 gives good service in many applications where improved stability of grease lubrication would otherwise be required.

The special high viscosity base oil in Shell Darina Grease R 2 makes it particularly suitable for low grease lubrication of heavily loaded slow speed bearings.

Very useful: Shell Darina Grease R 2 may be used at temperatures as high as 250°C, but only so long as the lubrication period is suitably reduced.

Operating Temperature

A correct selection of heavy duty temperature greases in the form of grease (stable soap thickeners) is vital under high temperature conditions, maintaining the grease structure, thereby ensuring the maximum load lubrication available. The special program, the selection criterion in Shell Darina Grease R 2 is their maximum testing condition, it controls the composition and viscosity stability of the base oil and helps to extend beyond the usual industrial working temperature.

Sealing

Shell Darina Grease R 2 does not melt the most structured greases and hence, its consistency changes only marginally with increasing temperatures. In bearings operating at high temperatures it avoids softening and seeps in grease providing good sealing and continuous lubrication under all the possible conditions.

Re-lubrication

Grease life under continuously poor lubrication is equivalent when with bearing operating under normally identical conditions.

Changes occur in an oily film and viscosity can thus be considerably affected by addition of the most commonly suggested percentage of dust, sand and foreign matter.

Resistance to water is not reduced significantly by this treatment (continue).

Recommendations should be made for a trial test and results, where necessary, in the light of service conditions.

Sealing (Sealing)

Normally, sealing (Sealing) should be designed to allow for complete greasing during the installation. Accordingly, the sealing should be provided for periods covering the complete replacement of the grease (Sealing).

Typical Physical Characteristics

Shell Darina Grease	R 2
NLGI Consistency	2
Grease Type	Organic Clay
Base Oil Grade	Mineral
Minimum Viscosity (@ 40°C) (cP)	100 100
Drop Point (@ 20°C) (°C)	250-260
Shrinkage Point (°C) (@ 100°C)	300

These characteristics are typical of normal production. Other tests performed will confirm in Shell's laboratories variations in these characteristics may occur.
