

## BASCOM AVR Tutorial

BASCOM AVR is a compiler used for writing software to download on Atmel 8 bit microcontrollers. It is easy to learn and use and is very inexpensive.

As you go through the tutorial, you can navigate back and forth with the toolbar on the left of your screen or with the back and forward buttons on the bottom of the page.

At the end of the tutorial, there is a link to open a printable version of this tutorial.

If you have any suggestions on improving this or other tutorials, would like to see another added or even have one ready that you would like to add to the site, send the webmaster an email with the description and, if applicable, a copy of the tutorial you wish to submit.

There is no fee for submitting a tutorial nor is there a fee paid to the submitter. This site is to make available free information and is maintained through affiliate advertising.

### *Downloading*

BASCOM AVR is available for download from several locations. Two that I will mention are the MCS Electronics site, [http://www.mcsinfo.com/download\\_avr.htm](http://www.mcsinfo.com/download_avr.htm). Also, you will find the user manual available on those same pages. I performed this installation on a computer running a 2 GHz Celeron processor with Windows XP as the operating system.

### *Unzipping*

Start by creating a folder on your desktop named 'bascom.' Download all six of the files (each labeled board 1.zip, board 2.zip, etc) into the bascom folder you created on your desktop. After all of the files have been successfully downloaded, unzip the files into the same folder.

### *Installing*

Open the unzipped folder board 1 and click the setup icon. You may get a warning for the digital signature validation.
