# Using the **Anchorplex**<sup>TM</sup> System to Build Segmental Retaining Walls

The Anchorplex<sup>TM</sup> retaining wall system offers a unique, nonconventional solution to difficult-site wall construction problems. The Anchorplex system is a retaining wall built with Anchor<sup>TM</sup>-licensed products and self-compacting structural backfill that meets Anchor Wall Systems, Inc.'s specifications, and that is backed by engineering support tools developed by Anchor Wall Systems.

It's often possible to build an Anchorplex wall in situations where traditional geogrid reinforcement isn't an option because of lot lines, rock outcroppings or other obstructions that limit excavation.

If poor in-fill soils are your challenge, using the Anchorplex system can reduce your construction costs.

Finally, the Anchorplex system can dramatically reduce excavating costs. When building with geosynthetic reinforcement, the excavation depth behind the wall is typically 60 percent or more of the height of the wall. With Anchorplex wall construction, that drops to between 30 and 40 percent, depending on conditions.
