Advances in Animal Breeding Biotechnology Kareem Qureshi, 2013-04 Genetic improvement is a main factor contributing to profitability sustainability and welfare in animal production It is a complex discipline bringing together population and quantitative genetics molecular genetics and reproduction biotechnology **Biotechnology in Animal Husbandry** R. Renaville, A. Burny, 2006-04-11 Animal biotechnology is a broad umbrella encompassing the polarities of fundamental and applied research including molecular modelling molecular and quantitative genetics gene manipulation development of diagnostics and vaccines and manipulation of tissue or digestion metabolism by growth promoters Although animal biotechnology in the broadest sense is not new what is new is the level of complexity and precision involved in scientists current ability to manipulate living organisms This new book sets out to show that the important ideas in animal biotechnology are exciting and relevant to everyday experience It represents an important update of the literature for research workers lecturers and advisers in animal science but is also a core text for advanced undergraduate courses in animal science and biotechnology It will be an essential acquisition for librarians in agriculture and veterinary science

Animal Breeding Orville L. Bondoc, 2008 This book is an outstanding contribution to the very meager list of books and reading materials available to Filipino teachers students and practitioners working on animal improvement Dr Bondoc offers scholarly breeding principles based on his years of experience and research Genomic, Proteomics, and Biotechnology RC Solti, Manishi Mukesh, Aastha Solti, 2022-12-29 High throughput molecular technologies omics can help to decipher the contributions of different physiological systems and identify candidate molecules that are representative of different physiological pathways thereby allowing the discovery of biomarkers Notably the omics technologies along with and computational methods bioprospecting and artificial intelligence will continue to lead to better understanding of biological mechanisms that are responsible for physical attributes or phenotypes Research breakthroughs obtained through these technologies can be used to enhance productivity of food animals meet the increasing demand for animal sourced foods enhance high quality nutrient availability ensure nutrient safety mitigate the effects of climate variability and result in new technologies that provide continued improvement in food security worldwide Such breakthroughs are an urgent necessity because over the past 50 years there has been an unprecedented increase in the world's population which will reach ten billion by the year 2050 Innovative and technological advancements that enhance all aspects of food production will arise from basic fundamental research Besides food animal by products have found many applications in the fields of pharmaceuticals cosmetics and household and industrial products Hence the need to ameliorate the productivity reproductivity growth performance and disease resistance in animals has created a worldwide interest in gaining a deeper understanding of animal biology biotechnology and genomics and proteomics The present volume thoroughly discusses the omics studies in domestic and non domestic animals and their role in mitigation of various challenges ahead The volume thus focuses on i Omics genomics proteomics transcriptomics metabolomics technologies in identifying characterizing

biodiversity ii Role of molecular techniques for improvement of domestic and non domestic organisms iii Animal and alternative model systems using stem cells tissue engineering cell free systems 3D platforms etc for studying life phenomena iv Genetically modified organisms as factories for the products

The Role of Biotechnology in Improvement of Livestock Muhammad Abubakar, Ali Saeed, Oguz Kul, 2015-04-07 This book examines how biotechnology can improve livestock breeding and farming and thereby also animal products In the first chapters the reader will discover which techniques and approaches are currently used to improve animal breeding animal health and the value of animal products Particular attention is given to reproduction techniques animal nutrition and livestock vaccines that not only enhance animal health but also have a significant effect on human health by ensuring safe food procurement and preventing zoonotic diseases In addition modern biotechnology can increase not only productivity but also the consistency and quality of animal food fiber and medical products In the second part of the book issues such as how animal biotechnology could affect the environment and the important topic of animal waste management are explored In the concluding chapter the authors discuss future challenges related to animal biotechnology This work will appeal to a wide readership from scientists and professionals working in animal production to those in farm animal management and veterinary science

Animal Biotechnology L.A. Babiuk, J.P. Phillips, Murray Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal's own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal's natural defence mechanisms to combat many infections or increase the animal's resistance to such infections These approaches should provide tools for eventual elimination of specific diseases from counties regions or whole continents
