## Separating Mixtures

**Purpose:** To separate a mixture using paper chromatography.

**Materials:**

Green Marking Pen  
Various marking Pens  
Beaker  
Pencil

Chromatography (filter) Paper  
Metric Ruler  
Clear Plastic Tape  
Rubbing Alcohol

**Procedures:**

1. Obtain one pre-marked filter paper and two blank filter papers.
2. On the unmarked filter papers, draw a line across the bottom of the filter paper, 1 cm up from the bottom.
3. Trace the pencil line with the two different green pens/markers.
4. Tape the unmarked end of the filter paper to the pencil so that it hangs down vertically from the pencil, when the pencil is held horizontally. (You may run two papers at one time.)
5. Carefully pour approximately ½ cm of rubbing alcohol into the bottom of the beaker.
6. Rest the pencil across the top of the beaker so that the bottom of the filter paper is barely beneath the surface of the rubbing alcohol (don't let the color line touch the alcohol).
7. Observe the changes in the strip of chromatography paper for 10 minutes.
8. Remove the filter paper from the beaker and immediately draw a line in pencil where the rubbing alcohol has stopped as it has moved up the chromatography paper.
9. Make additional marks in pencil to locate the point at which each band of color has moved along the chromatography paper.
10. Repeat steps 3 – 8 with each of the 2 unknowns your teacher has provided to you.

**Observations:** (Record at least 10 observations/questions)

**Data:** (Copy the following tables)

**Data Table #1:**

**A Laboratory Manual of Analytical Methods of Protein Chemistry, Including Polypeptides: Amino acid analysis of protein hydrolysates** Peter Alexander, Richard Joseph Block, Harold Palmer Lundgren, 1960 In the last fifteen years there

has been a revolution in the techniques available for the analysis and isolation of proteins Every time a new technique has been introduced numerous papers have appeared describing modifications to it and the research worker who wishes to employ these methods is faced with a very serious problem in deciding which particular variant to use These volumes are intended to provide the fullest practical detail so that any scientist can follow the procedure by using this book alone and without having recourse to the original literature The techniques which are described in full are ones in which all the authors have had first hand experience and the descriptions contain those small but important points which save so much time In the first volume separation and isolation procedures are discussed the second concerns its analysis and reactivity and the third volume with the measurement of the macromolecular properties of proteins
