

Name: _____

Date: _____

Student Exploration: Equilibrium and Concentration

Vocabulary: chemical equilibrium, concentration, equilibrium, equilibrium constant, reaction quotient, reversible reaction

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Gary has \$5,000 in his bank account and earns a modest salary. Every month he pays for rent, food, utilities, and entertainment.

- How will Gary's account change if he saves more than he spends? It will increase.
- How will Gary's account change if he spends more than he saves? It will increase.
- What happens if Gary spends exactly as much as he saves? It will stay the same.

Gizmo Warm-up

If Gary spends exactly as much as he earns, his savings will be in **equilibrium**. Equilibrium occurs when two opposing processes occur at the same rate, leading to no net change. In the *Equilibrium and Concentration* Gizmo, you will investigate how equilibrium can occur in chemical reactions.

To begin, check that **Reaction 1** is selected. Set **Moles NO₂** to 8 and **Moles N₂O₄** to 0.

- Click **Play** (▶) and observe the colliding molecules. What do you notice? The NO₂ molecules are free floating closer to the surface of the fluid in the beaker. The NO₂ molecules start to bond forming N₂O₄ molecules. After a while, the N₂O₄ molecules start to break apart again into NO₂ molecules. The fluid they reaction is occurring in is also decreasing and rising intermediately but leaning more to decreasing than increasing.

In the Gizmo, a blue flash appears every time two reactants combine to form a product. A red flash appears every time a product dissociates into reactants.

- Click **Reset** (↺), and set **Moles NO₂** to 0 and **Moles N₂O₄** to 8. Click **Play**.
