Briggs, 2010 **Multivariable Calculus** Soo Tan, 2010-05-18 This manual includes worked out solutions to every odd numbered exercise in Single Variable Calculus Early Transcendentals Chapters 0 9 of Calculus Early Transcendentals **Multivariable Calculus** Clark Bray, 2013-02-21 The YouTube Channel for this book with a complete set of video lectures and hundreds of video explanations of exercises is at <https://www.youtube.com/playlist?list=PLGKxWeKRiy4WVzMzL4OB8HVabYagNrkO5> For more information see the book webpage at <http://www.math.duke.edu/cbray/mv> This is a textbook on multivariable calculus whose target audience is the students in Math 212 at Duke University a course in multivariable calculus intended for students majoring in the sciences and engineering This book has been used in summer offerings of that course several times taught by Clark Bray It is intended to fill a gap in the spectrum of multivariable calculus textbooks It goes beyond books that are oriented around formulas that students can simply memorize but it does not include the abstraction and rigor that can be found in books that give the most complete and sophisticated presentations of the material This book would be appropriate for use at any university It assumes only that the student is proficient in single variable calculus and its prerequisites The material in this book is developed in a way such that students can see a motivation behind the development not just the results The emphasis is on giving students a way to visualize the ideas and see the connections between them with less emphasis on rigor The book includes substantial applications including much discussion of gravitational electric and magnetic fields Maxwell's laws and the relationships of these physical ideas to the vector calculus theorems of Gauss and Stokes It also includes a brief discussion of linear algebra allowing for the discussion of the derivative transformation and Jacobian matrices which are then used often elsewhere in the book And there are extensive discussions of multivariable functions and the different ways to represent them geometrically manipulating multivariable equations and the effects on the solution sets [A Course in Multivariable Calculus and Analysis](#) Sudhir R. Ghorpade, Balmohan V. Limaye, 2010-03-20 This self contained textbook gives a thorough exposition of multivariable calculus It can be viewed as a sequel to the one variable calculus text [A Course in Calculus and Real Analysis](#) published in the same series The emphasis is on correlating general concepts and results of multivariable calculus with their counterparts in one variable calculus For example when the general definition of the volume of a solid is given using triple integrals the authors explain why the shell and washer methods of one variable calculus for computing the volume of a solid of revolution must give the same answer Further the book includes genuine analogues of basic results in one variable calculus such as the mean value theorem and the fundamental theorem of calculus This book is distinguished from others on the subject it examines topics not typically covered such as monotonicity bimonotonicity and convexity together with their relation to partial differentiation cubature rules for approximate evaluation of double integrals and conditional as well as

unconditional convergence of double series and improper double integrals Moreover the emphasis is on a geometric approach to such basic notions as local extremum and saddle point Each chapter contains detailed proofs of relevant results along with numerous examples and a wide collection of exercises of varying degrees of difficulty making the book useful to undergraduate and graduate students alike There is also an informative section of Notes and Comments indicating some novel features of the treatment of topics in that chapter as well as references to relevant literature The only prerequisite for this text is a course in one variable calculus
