The Grant Center for Outdoor Education gives student groups experience in studying nature and helping to restore the environment for fish, birds, and animals. The number of seedling trees that can be planted in one day depends on the number of students in the work group. Data from several different work groups is shown in the next graph. Draw a line that best fits the pattern in [workers, trees] data.

Answer the following questions on a separate sheet of paper.

1. Estimate how many trees will be planted by a work crew of 14. Explain how you find your answer.
2. Estimate how many workers will be required to plant 500 trees. Explain how you find your answer.
3. Write an equation for the graph model relating trees planted to number of workers.
4. What does that slope tell about the relationship between the variables?

Connected Mathematics 2 Prentice Hall (School Division),2006 *Teaching and Learning Mathematics* Linda Jensen Sheffield,Douglas E. Cruikshank,2004-03-29 Help students make sense of mathematics Rather than merely discussing how to improve students ability to do mathematics this fifth edition focuses on helping them make sense of mathematics Based on research on the functioning of the mind as it engages in learning the text supports teachers as they promote mathematical understanding strengthen students abilities to think and help students to attain computational fluency Features A rich collection of ready to use learning activities Fully integrated language and intent of Principles and Standards for School Mathematics PSSM A greater emphasis on problem solving and higher level thinking A greater focus on teaching mathematics to diverse learners Descriptions of a variety of promising and effective mathematics programs for the K 8 levels

El-Hi Textbooks and Serials in Print ,2006 Resources in Education ,1977-10 *Reliability in Computational Mechanics* John Tinsley Oden,1990 Much of what engineers and scientists do is modeling natural phenomena by developing mathematical models of nature they can study and predict the behaviour of physical systems The remarkable advances in technology over the last half century attest to the success of this approach However there has been growing concern about the issue of reliability in computational modeling in recent years The success of computational modeling in certain classes of linear problems may have lulled many into a false sense of confidence in computed results The papers in this volume discuss topics such as Exactly how reliable are contemporary computational modeling procedures How can this reliability be assessed What factors affect it How can reliability be improved What direction must future research in computational modeling take to increase reliability of the more sophisticated models needed to simulate phenomena of importance in engineering The work covers the application of existing methods to issues of reliability as well as studies of new methods that touch upon or depend upon the reliability of computational techniques in mechanics **Matriculation model answers:**
