Control Theory in Engineering Constantin Volosencu,Xian Du,Ali Saghafinia,Sohom Chakrabarty,2020-05-27 The subject matter of this book

ranges from new control design methods to control theory applications in electrical and mechanical engineering and computers. The book covers certain aspects of control theory including new methodologies, techniques, and applications. It promotes control theory in practical applications of these engineering domains and shows the way to disseminate researchers' contributions in the field. This project presents applications that improve the properties and performance of control systems in analysis and design using a higher technical level of scientific attainment. The authors have included worked examples and case studies resulting from their research in the field. Readers will benefit from new solutions and answers to questions related to the emerging realm of control theory in engineering applications and its implementation.

21 Equations that Shaped the World Economy Panayotis G. Michaelides, 2025-01-23. This accessible and engaging textbook provides an introduction to the equations that have defined economics and shaped the global economy. It not only presents the ideas, concepts, and applications that underpin these equations but also places them within their broader social and historical contexts. Simple mathematical examples and illustrations of the real-world application of the equations are combined with an overview of the implications to give a complete understanding of the power and importance of each equation. It will be relevant to economics students wishing to broaden their understanding of mathematics, mathematical economics, applied economics, and the history of economic thought.

Approaches to Enhance the Performance of Simheuristic Methods in the Optimisation of Multi-echelon Logistics Distribution Networks Maja Ammouriouva, 2021. Management of logistics distribution networks is a challenging task. Decision makers rely on logistics assistance systems that recommend actions to optimise the networks. These systems can be based on simheuristics to benefit from metaheuristics in exploring possible solutions and on simulation for modelling the networks. This book presents three approaches to recommend promising solutions to optimise the networks with fewer simulation runs. The first approach utilises information from the network to guide the search of metaheuristics. In this approach, domain-specific information is defined and assigned to actions. The metaheuristic algorithm utilises this domain-specific information to find more promising solutions. The second approach is reducing the number of possible solutions by grouping actions with respect to their domain-specific attributes. Here, the smaller solution space decreases the number of required simulation runs. The last approach looks for equivalent solutions that cause the same changes in the network. This approach aims to skip unnecessary evaluations and thus simulation effort.
