Witness System Simulation Modeling Lanner:

Planning of Eco-efficient Process Chains for Automotive Component Manufacturing Christopher Schmidt, 2021-01-04 This book includes the introduction of emerging manufacturing technologies and planning cases with established technologies. The planning of eco efficient process chains is crucial for manufacturing companies. However in the state of the art planning various barriers exist towards the integration of the environmental dimension. Against this background a concept for the integration of classic lean and environmental criteria into the three planning phases of process chains is presented. During concept planning the Technology Assessment Tool supports planners in the identification of eco efficient technologies. During rough planning the Value Stream Design Tool enables the derivation of a production line based on workpiece characteristics. For detailed planning tools for eco efficient machine and process chain configuration are provided. Three case studies from large scale automotive component manufacturing with established and emerging technologies demonstrate the tool applicability.

Port Planning and Management Simulation Wenyuan Wang, Yun Peng, 2021-10-27 Port Planning and Management Simulation examines port planning simulation applications showing how they supports better port decision making. Using a clear organizational format based on actual port system structure and operation processes the book provides practical and theoretical insights on port planning and management. The book describes the water land collecting and distributing components of the port system focusing on management development and risk mitigation. It examines the key challenges based on discrete system simulation theory that is less affected by local or national regulations. It compares various simulation scenarios for optimal port operational strategy. It quantifies port emissions analyzes the impact of different reduction strategies and presents operational strategies for green port planning development and management. Port Planning and Management Simulation provides guidance for carrying out deep analysis in a complex and dynamic system providing an integrated solution framework based on simulation techniques for improving efficiency and cost savings of the port system. Bridges the gaps between theory practice and policy. Comprehensive practical and multidisciplinary content. Case Studies.
