

## FAA BCA Requirements

The FAA has developed guidance materials for airports conducting BCAs for capacity projects to be considered for FAA funding. In particular, the FAA has outlined a BCA process for airport projects. The analysis is divided into 11 steps, from defining the project objectives to making recommendations. These steps are identified in *FAA Airport Benefit-Cost Analysis Guidance* (FAA, 1999a) and are summarized in this appendix. In addition, the *FAA Airport Improvement Program Handbook* (FAA, 2014a) provides information in Chapter 3, Paragraphs 3-14, 3-15, and 3-16, on the projects for which a BCA would be required. FAA guidance may change over time, and this summary is not intended to provide instruction on how to meet FAA requirements. Airports should refer directly to FAA requirements and guidance when conducting BCAs for projects funded by the FAA.

The 11 steps defined in FAA guidance are:

1. **Define project objectives:** Projects without clearly defined objectives may be inefficient, which is why it is important to state objectives at the outset. Objectives should be stated such that they address a problem or need at the airport. Examples of objectives for airport infrastructure projects include improving efficiency of airport operations and reducing the airport's environmental impacts on the surrounding community.
2. **Specify assumptions about future airport conditions:** These assumptions are usually developed to be used in an airport master plan. They include projected changes in demand, changes to facilities or anticipated expansions (independent of the project in question), constraints on airport capacity, and improvements in air traffic management protocol. More guidance on developing these projections is included in Chapter 7 of *Advisory Circular (AC) 150/5070-6B: Airport Master Plans* (FAA, 2015).
3. **Identify the base case (scenario of no investment):** The base case represents a realistic scenario in which the potential project does not take place. The base case must not represent airport activity as stagnant. All current and expected improvements as well as projected airport conditions must be taken into consideration.
4. **Identify and screen all reasonable alternatives to meet objectives:** Alternatives should be reasonable and independent of other infrastructure investments. In addition, a wide range of alternatives should be considered: investment in new facilities, improvement of existing facilities, demand management strategies, and redistribution of responsibility. It is important to identify as many logical alternatives as possible, but some alternatives may be screened out for various reasons (e.g., are too costly; may not be a good fit with existing facilities; and may be constrained by legal, political, or environmental challenges).
5. **Determine appropriate evaluation period:** The evaluation period is the period to be considered for evaluating the benefits and costs of an investment. There are three types of evaluation period that may be chosen: requirement life, physical life, and economic life. The requirement life is the amount of time for the benefits of a good or service to
