Cartilage is a flexible connective tissue that is found between bones in joints, in the rib cage, in the ear, in the nose, in the larynx, and in the intervertebral discs. It is composed of a dense network of collagen fibers.

Bone Structure

Bone tissue is made up of osteons, which are the basic structural units of bone. Each osteon consists of a central canal (the Haversian canal) surrounded by concentric layers of bone tissue. The osteons are held together by interstitial fluid, which provides a medium for the exchange of nutrients and waste products. The bone matrix is composed of collagen fibers and mineral salts, which give it its strength and rigidity.
