

VIVA QUESTIONS ANSWERS

Q1: Why a DC series motor should be not be started without load?

Ans: This is the reason why series motor should never be started on light loads or no load conditions. ... This can be seen from the speed-armature current and the speed-torque characteristics that on low armature current and low torque condition motor shows a tendency to rotate with dangerously high speed.

Q2: Why a DC series motor has a high starting torque?

Ans: For any dc motor, torque is directly proportional to the flux and armature current. In case of series motor the flux produced is directly proportional to the armature current. ... So as current during starting is 1.5 times the rated so starting torque is higher for series motor.

Q3: Compare the resistances of the field windings of DC shunt and series motor?

Ans: Resistance of series winding is less. It carries more current since directly connected in series with the armature. ... A shunt motor has the field windings connected in parallel with the armature and a series motor has the field windings connected in series with the armature.

Q4: What are the applications of DC series motor?

Ans:

Applications:

- It is a variable speed motor i.e. very low speed at high torque and vice versa. ...
- Its high starting torque makes it particularly suitable for a wide range of traction applications.
- **Industrial** uses are hoists, cranes, trolly cars, conveyors, elevators, air compressors, vacuum cleaners, sewing machines etc.
