

Biogeochemical Cycles – “Energy Flows and Matter Cycles” ANSWER KEY

This activity should be completed in your notebook.

Read your textbook pages 65 – 73.

1. What is a biogeochemical cycle? Movement of matter within/between ecosystems – involve biological, geological and chemical processes
2. What is a “pool”? What are “flows”? pools – contain matter, flows – processes that move matter (between pools)

Color and make a key for each biogeochemical cycle. As you read about each cycle (in your textbook and in the packet) answer the following questions. (You will want to add notes in addition to the questions you answer – especially for the elements: Ca, Mg, K and S)

The Water Cycle

1. Name three important needs for water.
 - a. Photosynthesis
 - b. Digestion
 - c. cellular respiration
[more specifically from your book: Allows essential molecules to move within/between cells, draws nutrients into tree’s leaves, dissolves/removes toxins]
 2. How is water distributed through the biosphere? Hydrologic cycle: evaporation, transpiration, precipitation, runoff, infiltration/percolation
 3. What draws water back to the earth? Gravity (precipitation)
 4. What is transpiration? Plants releasing water from their leaves into the atmosphere
 5. What determines which plants to grow where? Amount of precipitation
 6. What is an aquifer? Water saturated rock/soil (water permeable rock/soil – can contain water or transport it)
 7. Name two ways water travels from land to end the ocean. Seeps from aquifer (absorbed by land) or runoff (flows across land to ocean)
 8. What does runoff include? Water from rivers, melting snow, pollutants
 9. How much water enters the hydrologic cycle? 80% water enters from evaporation (because of the sun).
 10. How much water falls back as rain? 52%
- ***Other notes: Major reservoir – oceans – contain 97% of the earth’s water
Water system – closed system
Humans alter the system by foresting (decreases transpiration, increases runoff/flooding)
by paving roads (decreases percolation so less groundwater – increases runoff/evaporation)

The Carbon Cycle

1. What are macronutrients? Micronutrients?
 - a. Macronutrients: elements organisms need large amounts of, use large quantities of. Examples include carbon, hydrogen, oxygen, nitrogen, phosphorous, potassium, calcium, magnesium & sulfur.
 - b. Micronutrients: elements used in trace (small) amounts. Example include iodine, iron, zinc
2. What is the role of each of the following in the carbon cycle? State an example of each.
 - a. Primary producers: plants – incorporate carbon material into organic compounds using photosynthesis
 - b. Secondary CONSUMERS (typo): rabbits – eat primary producers
 - c. Decomposers: microorganism – break down dead producers/consumers and release organic matter back into the soil for producers to use
3. Where is most of the Earth’s carbon located and in what form? Atmosphere, CO₂
4. How does carbon enter the biotic part of the ecosystem? Photosynthesis
5. What function do plants have in the forest in the carbon cycle? Take carbon from CO₂ in atmosphere and “fix” it into organic compounds (starch, cellulose, carbohydrates)
6. How is carbon dioxide returned to the atmosphere? Respiration of plants & detritus feeders (decomposers)
**from textbook: combustion – burning fossil fuels
7. What is a primary producer? Plants (also known as autotrophs)

3 Cycles Of Matter Worksheet Answer Key
