Triggers and Ranked Keyword Searches Over Virtual XML Views Feng Shao, 2007

Current systems that publish XML relational data using XML views are passive in the sense that they can only respond to user initiated queries over the XML views Further existing systems do not support ranked keyword searches over virtual XML views which is important for exploring and retrieving information from large views In this dissertation we propose an XML view system whereby users can place active triggers on virtual unmaterialized XML views and can efficiently evaluate keyword search queries over such views In this architecture we present scalable and efficient techniques for processing triggers over nested views by leveraging existing support for SQL triggers over flat relations in commercial relational databases When evaluating the keyword search queries our approach exploits indices present on the base data and thereby avoids computing large parts of the view that are not relevant to the query results Another feature of the algorithm is that it supports top k results for queries over the virtual view and the resulting rank order is the same as if the view was materialized We have implemented our proposed techniques in the context of the Quark XML middleware system Our performance results indicate that our proposed techniques are a feasible approach to supporting triggers and ranked keyword searches over virtual XML views

Abstract Mastering Art of SEO : A dynamic application based approach of tools and strategies Dr. DIWAKAR CHAUDHARY,2023-10-27 Search engine optimization techniques often shortened to SEO lead to first positions in organic search results Some optimization techniques do not change over time yet still form the basis for SEO However as the Internet and web design evolves dynamically new optimization techniques flourish and flop Thus we looked at the most important factors that can help to improve positioning in search results It is important to emphasize that none of the techniques can guarantee high ranking because search engines have sophisticated algorithms which measure the quality of webpages and derive their position in search results from it Next we introduced and examined the object of the optimization which is a particular website The main objective of this book was to determine whether search engine optimization increases ranking of website in search results and subsequently leads to higher traffic **OCLC Micro** ,1991 An international journal devoted to OCLC systems and services **College Student Journal** ,2007 **Resources in Education** ,1998 **Education in China and the World** Niancai Liu,Zhuolin Feng,Qi Wang,2024-01-01 This open access book provides a comprehensive overview of education in China covering 12 critical topics including basic education higher education professional education STEM Science Technology Engineering and Mathematics education mental health education and international education and excellence initiatives Drawing from current research theoretical literature and real life stories this book examines the developmental trajectories achievements and best practices in the above mentioned topics to reflect realities of education transformation in China It also incorporates a global comparison of key indicators to explore strengths of and gaps in Chinese education with its global counterparts Setting its context in an ever changing world this book intends to explore conceptual support to develop a modern education system with Chinese features and world standards to provide implications for further developing quality education in all sectors and topromote understanding and
