

includes related to orders of the organisms. Example: Presence of notochord in mammals.

iii) Family has a group of related genera with still less number of similarities as compared to genus and species. Example: Fox and dog belongs to the same family. It is a group of entities below Order and above Genus.

iv) Order is a taxon below higher than Family and lower than class. Order being a higher category is the assemblage of families which exhibit a few similar characters.

v) Genus comprises a group of related species which has more characters in common in comparison to species of other genera. Ex: Lion, tiger and leopard are classified under genus *Panthera*. It is above species and below family.

#### 10. How is a key helpful in the identification and classification of an organism?

##### Solution:

The key is a taxonomic aid used to identify plants and animals, based on similarities and dissimilarities. It represents the choice between two opposite characters. This is useful for identifying contrasting characters. They are two contrasting characters, where one character's choice rejects another when the species, family, or genera is identified. If the entity is not already recorded, efforts are made for the first verification and reconsider its discovery before naming it. Therefore, each entity can be classified as it is known or unknown.

#### 11. Illustrate the taxonomical hierarchy with suitable examples of a plant and an animal.

##### Solution:

The table below depicts the taxonomic hierarchy with wheat as an example for the plant and the human as an example for animal.

Taxonomic categories	Wheat	Human
Kingdom	Plantae	Animalia
Phylum/Division	Angiospermae	Chordata
Class	Monocotyledonae	Mammalia
Order	Poales	Primata
Family	Poaceae	Hominidae
Genus	Triticum	Homo
Species	aestivum	Sapiens
