OSMOSIS & DIFFUSION

OSMOSIS & DIFFUSION

PERMEABILITY

- Membranes can be:
- **permeable** - allows all substances to pass in & out
 - **impermeable** - allows no substances to pass in & out
 - **semi-permeable** - allows some but not all substances (usually water) to pass in & out by using energy

Biological membranes are **selectively permeable**. They allow substances such as H_2O , Na^+ and Cl^- to pass in & out.

However, they do not allow **organic molecules** and cells to pass through easily if **active transport** is needed.

Active transport - movement of molecules from an area of high concentration to an area of low concentration using energy.

Diffusion - movement of molecules from an area of high concentration to an area of low concentration using energy.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Diffusion of water molecules from an area of high concentration to an area of low concentration.

Printable PDF

OSMOSIS

OSMOSIS & BLOOD CELLS

- Cell in a solution that is isotonic to the cell (concentration is the same):**
 - water moves in & out at equal rates
 - cell shrinks and swells at equal rates
- Cell in a solution that is hypotonic to the cell (concentration is lower):**
 - water moves out of cell at a slower rate than it moves in
 - cell shrinks and swells at a slower rate
- Cell in a solution that is hypertonic to the cell (concentration is higher):**
 - water moves out of cell at a faster rate than it moves in
 - cell shrinks and swells at a faster rate

OSMOSIS & PLANTS

Plants have cells with cell walls. When they are in a hypotonic solution, they take up water and become turgid. In a hypertonic solution, they lose water and become flaccid.

Plants have an osmoregulation system to regulate water and mineral ion levels. This is done by the **transpiration stream**. It consists of xylem and phloem in the vascular tissue.

OSMOSIS & PLANT CELLS

Plant cells have cell walls. When they are in a hypotonic solution, they take up water and become turgid. In a hypertonic solution, they lose water and become flaccid.

Turgid (swollen) - the normal pressure in the cytoplasm and cell wall against the cell wall in a plant.

Turgid pressure gives a plant cell great strength. It helps it **stand upright** and **keep it the cell in shape**.
