*Human Reproductive Biology* Sylvia S. Mader, 2005 This text presents human reproduction from the biological point of view It is most appropriate for use by non science students who would like a biological understanding of human reproduction The three parts of the book may be studied in whatever sequences the instructor desires Part I contains topics on human inheritance and biotechnology Part II has in depth coverage of fertilization and the major biological events of embryonic and fetal development In Part III the evolution of sexual reproduction is presumed to have increased biological fitness

**How We Do It** Robert Martin, 2013-06-11 Despite the widespread belief that natural is better when it comes to sex pregnancy and parenting most of us have no idea what natural really means the origins of our reproductive lives remain a mystery Why are a quarter of a billion sperm cells needed to fertilize one egg Are women really fertile for only a few days each month How long should babies be breast fed In *How We Do It* primatologist Robert Martin draws on forty years of research to locate the roots of everything from our sex cells to the way we care for newborns He examines the procreative history of humans as well as that of our primate kin to reveal what's really natural when it comes to making and raising babies and distinguish which behaviors we ought to continue and which we should not Although it's not realistic to raise our children like our ancestors did Martin's investigation reveals surprising consequences of and suggests ways to improve upon the way we do things now For instance he explains why choosing a midwife rather than an obstetrician may have a greater impact than we think on our birthing experience examines the advantages of breast feeding for both mothers and babies and suggests why babies may be ready for toilet training far earlier than is commonly practiced *How We Do It* offers much needed context for our reproductive and child rearing practices and shows that once we understand our evolutionary past we can consider what worked what didn't and what it all means for the future of our species

*Human Reproductive Biology* Mark M. Jones, 2012-12-02 *Human Reproductive Biology* focuses on the processes concerns and trends in human reproduction Divided into four parts with 19 chapters the book starts by tracing the history of human reproduction biology and the questions and choices involved The first part focuses on the male and female reproductive systems The text notes the different organs involved in reproduction including the penis scrotum vagina oviducts and mammary glands The book discusses sexual development and differentiation particularly noting the variance of sex ducts and glands external genitalia and disorders of sexual development and determination The text also looks at puberty Concerns include gonadal changes from birth to puberty mechanisms that influence puberty and puberty and psychosocial adjustment The second part deals with menstrual cycle fertilization pregnancy labor and birth Some of the concerns include length of menstrual cycle absence of menstruation transport of sperm and ovum in the oviduct and semen release The text

also highlights labor and birthing processes as well as the relationship of neonates and parents The third part looks at the medical aspects of human reproduction infertility and sexually transmitted diseases Concerns include contraception abortion herpes genitalis and vaginitis The text folds with discussions on human sexual behavior population growth and family planning Concerns include sexual dysfunction the effects of overpopulation and population control The book is a vital source of data for readers interested in human reproduction *Biology of Human Reproduction. Report of a WHO Scientific Group, Etc* Scientific Group on the Biology of Human Reproduction (WORLD HEALTH ORGANIZATION),1964 *The Biology of Human Reproduction* J. J. Head,John Juan Head,Cynthia Clarke,1979 *The Biodemography of Human Reproduction and Fertility* Joseph Rodgers,Hans-Peter Kohler,2002-09-30 The book that you hold in your hands is the second in a series The two titles in the series are the following Genetic Influences on Human Fertility and Sexuality Theoretical and Empirical Contributions from the Biological and Behavior Sciences Edited by Joseph Lee Rodgers David C Rowe Warren B Miller Published by Kluwer Academic Press 2000 The Biodemography of Human Reproduction and Fertility Edited by Joseph Lee Rodgers Hans Peter Kohler Published by Kluwer Academic Press 2002 The series has published chapters by researchers who study human fertility from a particular perspective Biodemography We welcome your interest and participation in this developing subfield Or perhaps biodemography may be better referred to as a superfield Because biodemography so naturally crosses interdisciplinary boundaries and because its application draws together researchers from disparate disciplines it may well be more appropriate to consider that biodemography subsumes a number of other disciplines rather than the other way around In this preface we will describe our own efforts and those of many others to promote and develop the study of human fertility using methods models and theories from both biological and demographic domains In December 1997 25 participants from three different countries gathered in Tucson Arizona for a small conference with the title Genetic Influences on Fertility Related Processes That conference represented a fascinating blending of research from two apparently separate domains *Biology of Human Reproduction* World Health Organization,1964-01-01 *Dynamics of Human Reproduction* James W. Wood,2017-09-29 Awarded the W W Howells Award for the Outstanding Book in Biological Anthropology this volume presents a comprehensive integrated and up to date overview of the major physiological and behavioral factors affecting human reproduction In attempting to identify the most important causes of variation in fertility within and among human populations Wood summarizes data from a wide range of societies Trained as an anthropologist as well as a demographer he devotes special attention to so called natural fertility populations in which modern contraceptives and induced abortion are not used to limit reproductive output Such an emphasis enables him to study the interaction of biology and behavior with particular clarity The volume weaves together the physiological demographic and biometric approaches to human fertility in a way that will encourage future interdisciplinary research Instead of offering a general overview the focus is to answer one question Why does fertility and the number of live births vary from couple to couple

within any particular population and from population to population across the human species as a whole Topics covered include ovarian function conception and pregnancy intrauterine mortality reproductive maturation and senescence coital frequency and the waiting time to conception marriage patterns and the initiation of reproduction the fertility reducing effects of breastfeeding the impact of maternal nutrition on reproduction and reproductive seasonality This unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate level textbook and as a reference work
