cryptocurrency will only produce one percent of PoS coins With this small modification the apprehension of running into the risk of a monopolistic environment will drastically reduce as the drawback for creating a monopoly will be costly In the end the future outlook of cryptocurrency will be dividing the Bitcoin block by two This will be perhaps the foremost happening and erratic era in the overall history of Bitcoin The concept of block set of transactions reward halving was built into the genetic structure of Bitcoin by its developer In essence its purpose is to make Bitcoin vulnerable to devaluation Primarily it implies that the quantity of tokens of Bitcoin currently in circulation will be reduced This is something inevitable to the fate of Bitcoin So in essence it can be predicted with the passage of time the value of Bitcoin will increase and coin in circulation will decrease However it is also imperative to mention here that unlike conventional trading of shares in a stock exchange will be challenging task for the users of cryptocurrencies as they not only need to have the awareness and knowledge related to technology but also understand the mechanics of mining exploiting opportunity in crisis in the event of arbitrage and be very cautious in trading crypto in futures market Conducting exchange through hedging or in futures can be a bubble in disguise and in the situation of cryptocurrencies such as Bitcoin or Litecoin can drive the investor from the roof to the streets in a matter of hours So it is suggested that the portfolio mix should not be concentrated on one particular type of coin or tokens Predominantly the value of crypto behaves well as per the essence of a capital market as opposed to commodity or money market In other words the future trend can lead to panic but it does not mean that an individual goes berserk just stay calm provided you have tailored your mind set as per the knowledge and become well versed in all kind of connotations
