**Landmarks in Organo-Transition Metal Chemistry** Helmut Werner, 2008-12-16 Since the discovery of ferrocene and the sandwich type complexes the development of organometallic chemistry took its course like an avalanche and became one of the scientific success stories of the second half of the twentieth century Based on this development the traditional boundaries between inorganic and organic chemistry gradually disappeared and a rebirth of the nowadays highly important field of homogeneous catalysis occurred It is fair to say that despite the fact that the key discovery which sparked it all off was made more than 50 years ago organometallic chemistry remains a young and lively discipline

The Chemistry of Coordination Compounds Doris Grants, Coordination chemistry is a vital branch of inorganic chemistry that deals with the structures and properties of coordination compounds also known as complex compounds These compounds are

formed when central metal atoms or ions bind to surrounding molecules or ions known as ligands through coordinate covalent bonds. This field has grown tremendously in importance over the last century with coordination compounds playing critical roles in biological processes, industrial applications, and scientific advancements. Historically, coordination chemistry emerged in the late 19th century primarily through the pioneering work of Alfred Werner. In 1893, Werner proposed the first comprehensive theory of coordination compounds, challenging the existing ideas of chemical bonding and valency. His theories explained the behavior of complex salts and introduced concepts like coordination number and geometry. Werner's work earned him the Nobel Prize in Chemistry in 1913 and laid the foundation for our modern understanding of coordination chemistry. Today, coordination compounds are central to many areas of science and technology. In biology, they are found in vital molecules such as hemoglobin, chlorophyll, and vitamin B12, where metal ions play essential roles in oxygen transport, photosynthesis, and enzymatic reactions. In medicine, certain coordination complexes are used in cancer treatment, like cisplatin, a platinum-based chemotherapy drug. Industrially, they are indispensable in catalysis, dye production, and metallurgy. Their unique ability to form stable and often colorful compounds makes them valuable in both analytical chemistry and material science.

Volume 1 [The Chemistry of the Carbon-Carbon Triple Bond, Part 1](#) Saul Patai, 1978-10-03

The most complete resource in functional group chemistry. Patai's Chemistry of Functional Groups is one of chemistry's landmark book series in organic chemistry. An indispensable resource for the organic chemist, this is the most comprehensive reference available in functional group chemistry. Founded in 1964 by the late Professor Saul Patai, the aim of Patai's Chemistry of Functional Groups is to cover all the aspects of the chemistry of an important functional group in each volume, with the emphasis not only on the functional group but on the whole molecule.

[Supramolecular Assemblies Based on Electrostatic Interactions](#) M. Ali Aboudzadeh, Antonio Frontera, 2022-05-21

This volume presents recent advances and current knowledge in the field of supramolecular assemblies based on electrostatic interactions. The flexibility and simplicity of constructing assemblies is explained via several examples, illustrations, figures, case studies, and historical perspectives. Moreover, as there is an increasing demand for the use of theoretical and computational models of the interaction strengths for assisting with the experimental studies, one chapter specifically focuses on the modelling of supramolecular assemblies. Finally, various aspects of the recent advances of the field, as well as potential future opportunities, are discussed with the goal being to stimulate critical discussions among the community and to encourage further discovery. This volume aims to inspire and guide fellow scientists and students working in this field, and thus it provides a great tool for all researchers, graduates, and professionals specializing on the topic.
