Better, Faster, Lighter Java Bruce Tate,Justin Gehtland,2004-05-28 Sometimes the simplest answer is the best Many Enterprise Java developers accustomed to dealing with Java's spiraling complexity have fallen into the habit of choosing overly complicated solutions to problems when simpler options are available Building server applications with heavyweight Java based architectures such as WebLogic JBoss and WebSphere can be costly and cumbersome When you've reached the point where you spend more time writing code to support your chosen framework than to solve your actual problems it's time to think in terms of simplicity In Better Faster Lighter Java authors Bruce Tate and Justin Gehtland argue that the old heavyweight architectures are unwieldy complicated and contribute to slow and buggy application code As an alternative means for building better applications the authors present two lightweight open source architectures Hibernate a persistence framework that does its job with a minimal API and gets out of the way and Spring a container that's not invasive heavy or complicated Hibernate and Spring are designed to be fairly simple to learn and use and place reasonable demands on system resources Better Faster Lighter Java shows you how they can help you create enterprise applications that are easier to maintain write and debug and are ultimately much faster Written for intermediate to advanced Java developers Better Faster Lighter Java offers fresh ideas often unorthodox to help you rethink the way you work and techniques and principles you'll use to build simpler applications You'll learn to spend more time on what's important When you're finished with this book you'll find that your Java is better

faster and lighter than ever before

Projects in Enterprise Java, 2018 Java Enterprise isn't one of the easiest platforms to work with especially when it comes with a number of different confusing paradigms and jargon JDBC JTA JAX MVC Hibernate and so on to name a few Add other technologies such as MySQL and Struts and you're bound to leave someone more confused than when they started Common courses often leave the user with the basics such as creating a simple application and you are okay You can follow along with the instructor and finish the project and then replicate it but the moment you are asked to modify the application for real world use you won't know what to do How do you fix the errors or even know what the pop up error means This is why we have designed this comprehensive course The main aim of this Java EE tutorial is to help you gain real world practical application knowledge of Java Enterprise This course will show you exactly how to deviate from the theory to actually learning how to start building your own applications Using a project based approach you'll not only follow the instructor but you'll also learn why and how in addition to simply what Before we delve into the course details further let's take a quick look at what Java Enterprise actually is Java Enterprise is a set of specifications that extend the Java SE platform and allow developers to build scalable applications that can handle transactions security concurrency and so on Resource description page
