Bioreaction Engineering Principles John Villadsen, Jens Nielsen, Gunnar Lidén, 2011-07-12 The present text is a complete revision of the 2nd edition from 2003 of the book with the same title In recognition of the fast pace at which biotechnology is moving we have rewritten several chapters to include new scientific progress in the field from 2000 to 2010 More important we have changed the focus of the book to support its use not only in universities but also as a guide to design new processes and equipment in the bio industry A new chapter has been included on the prospects of the bio refinery to replace many of the oil and gas based processes for production of especially bulk chemicals This chapter also serves to make students in Chemical Engineering and in the Bio Sciences enthusiastic about the whole research field As in previous editions we hope that the book can be used as textbook for classes even at the undergraduate level where chemical engineering students come to work side by side with students from biochemistry and microbiology To help the chemical engineering students Chapter 1 includes a brief review of the most important parts of microbial metabolism In our opinion this review is sufficient to understand microbial physiology at a sufficiently high level to profit from the rest of the book Likewise the bio students will not be overwhelmed by mathematics but since the objective of the book is to teach quantitative process analysis and process design at a hands on level some mathematics and model analysis is needed We hope that the about 100 detailed examples and text notes together with many instructive problems will be sufficient to illustrate how model analysis is used also in Bio reaction Engineering Bioreaction Engineering Principles Jens Nielsen, John Villadsen, Gunnar Lidén, 2012-12-06 This is the second edition of the text Bioreaction Engineering Principles by Jens Nielsen and John Villadsen originally published in 1994 by Plenum Press now part of Kluwer Time runs fast in Biotechnology and when Kluwer Plenum stopped reprinting the first edition and asked us to make a second revised edition we happily accepted A text on bioreactions written in the early 1990 s will not reflect the enormous development of experimental as well as theoretical aspects of cellular reactions during the past decade In the preface to the first edition we admitted to be newcomers in the field One of us JV has had 10 more years of job training in biotechnology and the younger author IN has now received international recognition for

his work with the hottest topics of modern biotechnology Furthermore we are happy to have induced Gunnar Liden professor of chemical reaction engineering at our sister university in Lund Sweden to join us as co author of the second edition His contribution especially on the chemical engineering aspects of real bioreactors has been of the greatest value Chapter 8 of the present edition is largely unchanged from the first edition We wish to thank professor Martin Hjortso from LSU for his substantial help with this chapter
