

## **CHAPTER 4**

### **Research Methodology and Design**

#### **4.1 Introduction**

All research is based on some underlying philosophical assumptions about what constitutes 'valid' research and which research method(s) is/are appropriate for the development of knowledge in a given study. In order to conduct and evaluate any research, it is therefore important to know what these assumptions are. This chapter discusses the philosophical assumptions and also the design strategies underpinning this research study. Common philosophical assumptions were reviewed and presented; the interpretive paradigm was identified for the framework of the study. In addition, the chapter discusses the research methodologies, and design used in the study including strategies, instruments, and data collection and analysis methods, while explaining the stages and processes involved in the study.

The research design for this study is a descriptive and interpretive case study that is analysed through qualitative methods. Questionnaires were used to evaluate participants' WebCT skills (before the course starts) and to determine their levels of satisfaction in the course (at the end of the case study). A descriptive statistical method was used to analyze the student satisfaction survey. Participant observation, face-to-face interviews, focus-group interviews, questionnaires, and member checking were used as data collection methods. Furthermore, the justification for each of the data collection methods used in the study was discussed. Finally, in order to ensure trustworthiness of the research, appropriate criteria for qualitative research were discussed, and several methods that include member checks, peer reviews, crystallisation and triangulation were suggested and later employed. The chapter closed with a diagrammatic representation of the major facets of the envisaged framework for the research design and development of the study, and a discussion on the project management approach envisaged for this study.

Investigation and Evaluation of the Primary Market Benchmark Syndication Process in Debt Capital Markets Alexander Malitsky, 2017-08-21 Master s Thesis from the year 2017 in the subject Business economics Investment and Finance grade 55 The University of Liverpool language English abstract The dissertation aims to analyze the process of issuing new bonds in the EUR debt capital markets and more specifically the approach by which investment banks consort with each other syndicates to jointly execute a new issue In this thesis the aspects of fairness efficiency and regulatory implications were first analyzed from a theoretical perspective in the literature review and the information gleaned was thereafter combined with a practical view based on a survey conducted with 54 active syndicate professionals Additionally experts with more than ten years of experience were interviewed in order to enhance the reliability of the findings The outcomes therefore showcase an extensive comparison between theory and practice while also outlining prospective trends within the business of primary markets In summary this thesis reveals aspects of the syndication process as it is executed on a daily practical basis that appear contrary to a theoretical impression of efficiency and fairness However the input from current professionals highlights the immensely complex and varied applicable strategies and that many aspects must be evaluated on a case by case basis On the contrary the newly implemented regulations that shape the syndication process were determined to be unable to comply with such sophisticated requirements Thus the analysis concludes that the syndication business is self regulating by nature and that it is harmed by a lack of equal application by the investment banks within the EUR area Moreover the syndication professionals indicated a strong trend towards automation and digitalization of the process even though a more detailed investigation of this aspect showed that full exclusion of investment banks is not desirable because of a number of operational and strategic reasons

Strategy Deployment in Business Units Maik Schlickel, 2013-01-24 This book reveals and presents the root causes that lead to varying improvement performances across different locations of a global positioned manufacturing organization

Conducting a multiple case study analysis of manufacturing sites around the world the author found that the quality of the strategy deployment process is vital especially when it is clear to all affected employees a situation we refer to as strategy cascading But having a sound strategy cascading alone is not enough The author worked out that a company which achieves to align its sound strategy cascading with the company context and leadership style of its top management team is likely to realize more operations improvements than do companies that missed to do so *Expatriate Manager's Adaption and Knowledge Acquisition* Yan Li,2015-10-24 This book is among the first to theoretically and empirically examine what and how Western expatriate managers learn and develop from their international assignments in China The book draws on literature associated with expatriate studies experiential learning theory and knowledge acquisition to develop an expatriate learning process model Following on from this the study then examines expatriate learning outcomes from four perspectives learning style transition adaptive flexibility global mind sets and managerial tacit knowledge It enhances understanding of the cultural differences between Western countries and China as well as the kinds of learning strategies successful expatriates adopt in order to quickly adapt to intercultural business contexts This book will appeal to international business practitioners and research fellows who are interested in international human resource management **Pottery Making and Communities**

**Program scheduling and simulation in an operating system environment** bernard lampard,2014-02-03 Research Paper postgraduate from the year 2011 in the subject Computer Science Commercial Information Technology grade A Massachusetts Institute of Technology language English abstract CPU scheduling is a technique used by computer operating systems to manage the usage of the computer s central processing unit In a multi programming environment whereby several processes are running on the same processor it is essential to use scheduling criteria to avoid collisions in the computer s operations This will help users in a given information technology oriented firm to share server spaces and resources like printers and file storage spaces In the multi tasking environment a program called CPU scheduler selects one of the ready processes and allocates the processor to it There are a number of occasions when a new process can or must be chosen to run When a running process block and changes its state to Blocked When a timer for a running process expires When a waiting process unblocks and changes its state to Ready and When a running process terminates and changes its state to Exit Wikipedia 2013 Different types of scheduling programs referred to as algorithms can be employed in CPU scheduling instances Among the most popular scheduling algorithms is Shortest Job First SJF SJF gives the processor to the process with the shortest next time allocation known as the burst If there are processes with similar CPU bursts in the event queue the scheduler uses First Come First Served algorithm which allocates the first process to arrive in the queue to the processor

regardless of its burst time It operates under the assumption that the length of the next CPU burst of each of the processes in ready queue is known CPU scheduling 2013 The SJF algorithm can be used in both pre-emptive and non-preemptive methods The algorithm can be preemptive or not Shortest Job First with preemption uses priority measure to determine the next process to be given the CPU The processes will be having different CPU bursts and different priority levels allocated to them The process with the least priority magnitude is always picked next A process already allocated the processor can be preempted the CPU and allocation done to another process with higher priority when such a process arrives in the queue SJF with non-preemptive operates in the normal procedure whereby the job with the least CPU burst in the waiting queue is always picked next for allocation of the CPU and the rest of the processes have to wait no matter their urgency Based on the introduction above it is essential to use the right CPU scheduling strategy to help us achieve Commercial Investments and Mission Drift in Microfinance Marc Moser,2013 The microfinance sector has witnessed various controversies and criticisms recently as a consequence of its commercialization and the related involvement of international investors Against this background the qualitative case study reported on examines the perceptions of stakeholders from the Swiss microfinance investment network How do the various investor related stakeholder groups perceive the motivation to become engaged in microfinance the mission drift issue and the current state and potentials of mutual value creation The findings suggest that common ground on fundamental questions facilitates superior mutual value creation among the investigated stakeholders Implications include the need for enhanced coordination between private and public stakeholders **Blockchain Technology and its Impact on International Trade. What does the Future Hold?** Mehedi Hasan,2021-10-18 Master's Thesis from the year 2021 in the subject Business economics Miscellaneous grade Merit University of Salford course International Business language English abstract The research aimed to analyse the impact of blockchain technology on international trade and find out how blockchain technology can improve the various fields of international trade The research also intended to find the challenges regarding the implementation of blockchain technology in international trade to help companies achieve successful collaboration and understand what requirements need to be met in advance The literature review of this research covered the fundamentals of blockchain technology blockchain's role in facilitating supply chain and trade finance the impact and adoption of blockchain technology and blockchain implementation's key challenges A qualitative approach was used based on 12 semi-structured in-depth interviews with ten companies operating in different business fields and two blockchain specialists to obtain empirical data This research found that blockchain technology has significantly impacted international trade by improving supply chain efficiency reducing the complexity of the paper-based trade process and enabling faster cross-border payments The empirical findings presented that blockchain can facilitate the supply chain by providing a high level of transparency and better product traceability Furthermore the findings showed that smart contracts could facilitate trade finance by providing automatic payments and eliminating intermediaries and blockchain

based ICOs could be a great fundraising option for innovative projects. However, this research also found that the large scale implementation of blockchain in trade finance is still not possible due to government regulations. Blockchain technology ensures to transform the supply chain and trade finance and reduce the complexity of the current international trade process. However, some critical challenges are associated with blockchain implementation and some essential requirements need to be met in advance for successful implementation, which was discussed in this research. Furthermore, several suggestions regarding the large scale implementation of blockchain in trade finance were presented. The empirical findings will help companies develop their adoption strategies and prepare to implement the technology in the trade process. Furthermore, the findings of this research can bring new insight into the policymaking process regarding the implementation of blockchain in trade finance.
