*Bridging the Education Divide Using Social Technologies* Somprakash Bandyopadhyay, Arina Bardhan, Priyadarshini Dey, Sneha Bhattacharyya, 2021-02-06 This book explains the concept of education divide in rural India and identifies various factors that shape and sustain such a divide. In doing so it also discusses a range of attempts undertaken to bridge the education divide. Subsequently the book has attempted in providing a socio technical framework towards optimally deploying social technologies for addressing the issue of education divide of marginalized communities. The proposed framework offers a transition from traditional content centric teacher centric and centralized education ecosystem to a connection centric learner centric and decentralized education ecosystem of the socio digital age. It demonstrates how Internet enabled digital platforms based on the principles of sharism and mass collaboration using social technologies could help to solve one of the greatest problems facing the world mitigating the extant education divide by delivering quality education to underprivileged sections of society. The book also presents empirical validation of the proposed framework to show how a community driven blended learning platform can mobilize the dormant knowledge capital of domain experts to teach underprivileged rural Indian children as well as help form communities of practice to enable lifelong learning for the rural adult population. The book closes by pointing out the challenges involved in building an equitable education ecosystem using social technologies and ultimately the possibility of creating a fair and equitable society. Given its scope the book offers a valuable resource for researchers policymakers and practitioners in the domain of education who want to transform education ecosystems by using technological and process related innovations to improve educational practices for underprivileged sections of society.

**Building Services Journal**, 2006      **Holistic Analysis and Management of Distributed Social Systems** Peter Simon Sapaty, 2018-09-22 This book describes the application of a high level technology to solve problems in distributed systems that have networked structures with millions to billions of nodes. The main difference from other works is that the approach is based on holistically and simultaneously analysing these systems using a spatial pattern matching mode which produces solutions hundreds of times faster than usual. The latest version of the technology is described together with implementation details and basic Spatial Grasp Language. In addition the book highlights numerous solutions covering graph and network problems their use in large social industrial and business ecosystems social robotics and driverless transport and the possibility of extrapolating from known gestalt laws on distributed systems which could potentially be applied in civil and defence contexts. The book is intended for system scientists business and industry managers economists application programmers security and defence personnel as well as university students.      **Variable Refrigerant Flow Systems** Napoleon Enteria, Takao Sawachi, Kiyoshi Saito, 2023-01-31 This book compiles the latest research development and application of VRF systems with contributions from various experts who pioneered and contributed to the development of the VRF system.
