distributional properties It also provides an empirical and theoretical comparison between Piedmontese SCLs and SCLs in other Northern Italian Dialects NIDs of SCLs types in the NIDs have been regarded as Since the 1980s the majority elements of agreement in that they contribute to the realisation of subject verb agreement by expressing features of the subject similar in a way to verbal inflection Nonetheless SCLs are not to be assimilated to verbal affixes as they exhibit different properties Most distinctively they can be separated from the verb by other clitic elements and in the case of the varieties considered here SCLs are optional in all contexts and may be omitted in coordination A more refined identification of SCLs separates SCLs which encode agreement features from those which do not and are related to pragmatic factors as originally observed by Beninca 1994 with respect to the clitic *a* in Paduano The different morphological and syntactic properties that characterise SCLs across the NIDs have justified numerous accounts which regard them as head of their own projection

A Comparative Grammar of Borgomanerese Christina Tortora, 2014 This book treats the morphosyntax of Borgomanerese a Northern Italian dialect The rich description of the many unusual features of this dialect some of which have not been previously reported in the literature gives rise to a number novel theoretical analyses advancing our understanding of syntax and syntactic theory
