The Simulation of Interior Ballistic Performance of Guns by Digital Computer Program PAUL G. BAER, JEROME M. FRANKLE, ARMY BALLISTIC RESEARCH LAB ABERDEEN PROVING GROUND MD., 1962 When non conventional guns are to be considered or when detailed design information is required interior ballistic calculations become more difficult and time consuming To deal with these problems the equations which describe the interior ballistic performance of guns and gun like

weapons have been programmed for the high speed digital computers available at the Ballistic Research laboratories The major innovation contained in the equations derived in this report is the provision for use of propellant charges made up of several propellants of different chemical compositions and different granulations Results obtained by the method described in this report compare favorably with those of other interior ballistic systems In addition considerably more detail is obtained in far less time A comparison with experimental data from well instrumented gun firings is also presented to demonstrate the validity of this method of computation
