Advanced Concepts in Particle and Field Theory Tristan Hübsch, 2023-02-09 This 2015 advanced textbook now OA provides students with a unified understanding of all matter at a fundamental level

One Hundred Years of General Relativity Wei-Tou Ni, 2017 The aim of this two volume title is to give a comprehensive review of one hundred years of development of general relativity and its scientific influences This unique title provides a broad introduction and review to the fascinating and profound subject of general relativity its historical development its important theoretical consequences gravitational wave detection and applications to astrophysics and cosmology The series focuses on five aspects of the theory Genesis Solutions and Energy Empirical Foundations Gravitational Waves Cosmology Quantum Gravity The first three topics are covered in Volume 1 and the remaining two are covered in Volume 2 While this is a two volume title it is designed so that each volume can be a stand alone reference volume for the related topic Page 4 of cover

On the Topology and Future Stability of the Universe Hans Ringström, 2013-05-23 A general introduction to the initial value problem for Einstein's equations coupled to collisionless matter The book contains a proof of future stability of models of the universe consistent with the current observational data and a discussion of the restrictions on the possible shapes of the universe imposed by observations

General Relativity and Gravitational Physics Giampiero Esposito, 2005-03-29 All papers were peer reviewed Research advances in gravitation and general relativity are discussed ranging from classical to quantum theories of gravity Relativistic theories have become the basic model for new research fields encompassing important experiments and observations which represent a frontier on which Einstein's theory of gravity can be tested This will provide some new insight into the field of gravitational physics The proceedings will be a valuable source for advanced graduate students and research workers at all levels

The Mathematical Theory of Cosmic Strings M.R. Anderson, 2015-05-06 This book is a comprehensive survey of the current state of knowledge about the dynamics and gravitational properties of cosmic strings treated in the idealized classical approximation as line singularities described by the Nambu Goto action The author's purpose is to provide a standard reference to all work that has been published since the mid 1970s

Proceedings of the Eleventh Marcel Grossmann Meeting on General Relativity Hagen Kleinert, Robert T. Jantzen, Remo Ruffini, 2008 The Marcel Grossmann Meetings are three yearly forums that meet to discuss recent advances in gravitation general relativity and relativistic field theories emphasizing their mathematical foundations physical predictions and experimental tests These meetings aim to facilitate the exchange of ideas among scientists to deepen our understanding of space time structures and to review the status of ongoing experiments and observations testing Einstein's theory of gravitation either from ground or

space based experiments Since the first meeting in 1975 in Trieste Italy which was established by Remo Ruffini and Abdus Salam the range of topics presented at these meetings has gradually widened to accommodate issues of major scientific interest and attendance has grown to attract more than 900 participants from over 80 countries This proceedings volume of the eleventh meeting in the series held in Berlin in 2006 highlights and records the developments and applications of Einstein's theory in diverse areas ranging from fundamental field theories to particle physics astrophysics and cosmology made possible by unprecedented technological developments in experimental and observational techniques from space ground and underground observatories It provides a broad sampling of the current work in the field especially relativistic astrophysics including many reviews by leading figures in the research community *Particle Physics and the Universe* Claes Fransson,2001 It is generally felt in the cosmology and particle astrophysics community that we have just entered an era which later can only be looked back upon as a golden age Thanks to the rapid technical development with powerful new telescopes and other detectors taken into operation at an impressive rate and the accompanying advancement of theoretical ideas the picture of the past present and future Universe is getting ever clearer Some of the most exciting new findings and expected future developments are discussed in this invaluable volume The topics covered include the physics of the early Universe and ultra high energy processes Emphasis is also put on neutrino physics and astrophysics with the evidence for non zero neutrino masses emerging from both solar neutrinos and atmospheric neutrinos covered in great depth Another field with interesting new results concerns the basic cosmological parameters where both traditional methods and the potential of new ones like deep supernova surveys and acoustic peak detections in the cosmic microwave background are thoroughly discussed Various aspects of the dark matter problem such as gravitational lensing estimates of galaxy masses cluster evolution and hot cluster electron distortions of the thermal microwave background spectrum are also discussed as are particle physics candidates of dark matter and methods to detect them Cosmic rays of matter and antimatter are included as a topic and so is the problem of the enigmatic dark energy of the vacuum Contents Cosmology with Clusters of Galaxies N A Bahcall Radiochemical Solar Neutrino Experiments and Implications T A Kirsten Evidence for Neutrino Oscillation Observed in Super Kamiokande Y Totsuka High Energy Cosmic Neutrinos S W Barwick Discovery of the Cosmic Microwave Background D T Wilkinson Starlight in the Universe P Madau Acceleration of Ultra High Energy Cosmic Rays R D Blandford Dark Matter and Dark Energy in the Universe M S Turner Dark Matter Tomography J A Tyson Status of Models for Gamma Ray Bursts M J Rees and other papers Readership High energy physicists astrophysicists and cosmologists

Space--time--matter Hermann Weyl,1922 **Accelerating Expansion** Gordon Belot,2023-07-25 Accelerating Expansion explores some of the philosophical implications of modern cosmology focused on the significance that the discovery of the accelerating expansion of the Universe has for our understanding of time geometry and physics The appearance of the cosmological constant in the equations of general relativity allows one to model universes in which space has an inherent

tendency towards expansion This constant introduced by Einstein but subsequently abandoned by him returned to centre stage with the discovery of the accelerating expansion This pedagogically oriented essay begins with a study of the most basic and elegant relativistic world that involves a positive cosmological constant de Sitter spacetime It then turns to the relatives of de Sitter spacetime that dominate modern relativistic cosmology Some of the topics considered include the nature of time and simultaneity in de Sitter worlds the sense in which de Sitter spacetime is a powerful dynamical attractor the limited extent to which observation can give us information about the topology of space in a world undergoing accelerated expansion and cosmologists favourite sceptical worry about the reliability of evidence and the possibility of knowledge the problem of Boltzmann brains
