

An exploratory investigation of the factors affecting risk assessment of street crime place

SU YUQING

Purpose

The purpose of this study was to examine factors that affect risk assessment of place of occurrence of crimes.

We selected four locations in total from the area surrounding Ikebukuro station where a field survey was conducted, that is, two places where crime occurrence was recognized, and two places where crime occurrence was not recognized. Then, we conducted an experiment, wherein participants were presented with videos as a visual stimulus.

Method

Participant

There were a total of 194 T University students in Tokyo, 61 of them were men ($M = 19.79$, $SD = 0.77$), and 133 of them were females ($M = 19.93$, $SD = 0.73$).

Experiment procedure

Videos were presented one by one on the screen. During the experiment, the information about the location of the presentation video provided one map and did not provide any other information. Video presentation order was taken to be counterbalanced, ① without crime, ② with crime, ③ with crime, ④ without crime.

Consideration

The purpose of this study was to examine factors that affect risk assessment of place of occurrence of crimes. We conducted simultaneous multiple regression analysis, and found that the possibility of being criminally victimized, the evaluation of the possibility of being snatched or robbed, and the presence or absence of attention were found to have significant influences on risk assessment.

Result

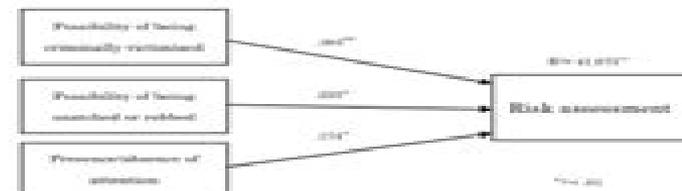

Figure 1 path diagram

Figure 1 showed that the result of the variance analysis was significant at 1% at $F(11, 387) = 41.875$. And "the probability of being criminally victimized" ($\beta = 0.393$, $p < .01$), "the evaluation of the possibility of being snatched or robbed" ($\beta = 0.225$, $p < .01$) "the presence or absence of attention" ($\beta = 0.174$, $p < .01$) had a positive influence on risk assessment.
