Laser Direct Structuring (LDS) is an exciting technology used to create Mobile Interconnect Devices (MID). Through the use of the dedicated laser system and a variety of pastes, it opens up many possibilities to create 3-dimensional MIDs with finer line width and spacing than what is possible with the conventional MIM processes. The LDS is a three step process. First, the antenna is molded in a standard single shot mold using one of the LDS pastes. Second, the desired pattern is directly structured onto the antenna by the 3-D laser system. Finally, the pattern is plated using the industry-standard methods where the plating adheres only where the plastic that has been activated by the laser, thus creating a conductive pattern. LDS offers the same advantages as the 2-Direct technology mentioned above plus the following additional advantages:

- Ability to produce thin (5, 15-mic) traces
- Flexibility for pattern changes during production
- Simple/fastest/lowest cost tooling
