Missing Data in Clinical Studies Geert Molenberghs, Michael Kenward, 2007-04-04

Missing Data in Clinical Studies provides a comprehensive account of the problems arising when data from clinical and related studies are incomplete and presents the reader with approaches to effectively address them. The text provides a critique of conventional and simple methods before moving on to discuss more advanced approaches. The authors focus on practical and modeling concepts providing an extensive set of case studies to illustrate the problems described. Provides a practical guide to the analysis of clinical trials and related studies with missing data. Examines the problems caused by missing data enabling a complete understanding of how to overcome them. Presents conventional simple methods to tackle these problems before addressing more advanced approaches including sensitivity analysis and the MAR missingness mechanism. Illustrated throughout with real life case studies and worked examples from clinical trials. Details the use and implementation of the necessary statistical software primarily SAS. Missing Data in Clinical Studies has been developed through a series of courses and lectures. Its practical approach will appeal to applied statisticians and biomedical researchers in particular those in the biopharmaceutical industry, medical and public health organisations. Handbook of Missing Data Methodology Geert Molenberghs, Garrett Fitzmaurice, Michael G. Kenward, Anastasios Tsiatis, Geert Verbeke, 2014-11-06. Missing data affect nearly every discipline by complicating the statistical analysis of collected data. But since the 1990s there have been important developments in the statistical methodology for handling missing data. Written by renowned statisticians in this area, Handbook of Missing Data Methodology presents many methodological advances and the latest applications of missing data methods in empirical research. Divided into six parts, the handbook begins by establishing notation and terminology. It reviews the general taxonomy of missing data mechanisms and their implications for analysis and offers a historical perspective on early methods for handling missing data. The following three parts cover various inference paradigms when data are missing, including likelihood and Bayesian methods, semi-parametric methods with particular emphasis on inverse probability weighting and multiple imputation methods. The next part of the book focuses on a range of approaches that assess the sensitivity of inferences to alternative, routinely non-verifiable assumptions about the missing data process. The final part discusses special topics such as missing data in clinical trials and sample surveys, as well as approaches to model diagnostics in the missing data setting. In each part, an introduction provides useful background material and an overview to set the stage for subsequent chapters. Covering both established and emerging methodologies for missing data, this book sets the scene for future research. It provides the framework for readers to delve into research and practical applications of missing data methods.
