Tools and Algorithms for the Construction of Analysis of Systems W. Rance Cleaveland, 2003-05-21 ETAPS 99 is the second instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises five conferences FOSSACS FASE ESOP CC TACAS four satellite workshops CMCS AS WAGA CoFI seven invited lectures two invited tutorials and six contributed tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Dierent blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

[The Cache Coherence Problem in Shared-Memory Multiprocessors](#) Igor Tartalja, Veljko Milutinović, 1996-02-13 Almost all software solutions are developed through academic research and implemented only in prototype machines leaving the field of software techniques for maintaining the cache coherence widely open for future research and development This book is a collection of all the representative approaches to

software coherence maintenance including a number of related efforts in the performance evaluation field The book presents a selection of 27 papers dealing with state of the art software solutions for cache coherence maintenance in shared memory multiprocessors It begins with a set of four introductory readings that provides a brief overview of the cache coherence problem and introduces software solutions to the problem The text defines and illustrates static and dynamic software schemes techniques for modeling performance evaluation mechanisms and performance evaluation studies The book is intended for the experienced reader in computer engineering but possibly a novice in the topic of cache coherence It also provides an in depth understanding of the problem as well as a comprehensive overview for multicomputer designers computer architects and compiler writers In addition it is a software coherence reference handbook for advanced undergraduate and typical graduate students in multiprocessing and multiprogramming areas

This text provides an up to date treatment of the fundamental techniques and algorithms for numerical analysis of deterministic and stochastic Petri nets a particular stochastic modelling formalism and the application of this modelling formalism to performance analysis for parallel computer architectures *Parallel Architectures and Compilation Techniques* Michel Cosnard, Guang R. Gao, Gabriel M. Silberman, 1994 Fine and medium grain parallelism continues to hold its own as a vital vibrant research topic Within the area new developments in superscalar and VLIW architectures and their associated compilation techniques have provided exciting new avenues to extract performance from a slowing technology curve Comprising 28 full length papers and a number of short poster papers this publication offers a high quality exploration of the current state of the art in the field It will be of particular interest to those involved in control structures and microprogramming processor architectures computer system implementation programming techniques and software engineering **Techniques for the Interactive Development of Numerical Linear Algebra Libraries for Scientific**

Computation Bret Andrew Marsolf, University of Illinois at Urbana-Champaign. Department of Computer Science, 1997 Abstract The development of high performance numerical algorithms and their effective use in application codes is an iterative process involving the refinement of the algorithms and their implementations that continues during the lifetime of the algorithm Knowledge and expertise from the areas of numerical analysis computer software compilers machine architecture and applications are required during the development To improve this process the FALCON environment was developed to combine the analysis techniques from restructuring compilers with the algebraic techniques from numerical analysis In this thesis interactive techniques that were developed to extend the FALCON environment are described These techniques allow the developer to improve the analysis of the algorithm to restructure the algorithm using transformation patterns to utilize additional information about structures within the data and to control the generation of the target code

The experimental results show that the codes generated by the interactive techniques have better performance than those generated automatically. In addition, the environment was extended to support the generation of C code. When the C code generated by FALCON is compared to the code generated by other MATLAB translators, the C code is typically faster. However, when compared against the Fortran 90 code generated by FALCON, the C code is usually slower. **SEDMS**, 1993

Proceedings of the USENIX Symposium on Experiences with Distributed and Multiprocessor Systems (SEDMS IV) USENIX Association, 1993 **Compiler Techniques for MATLAB Programs** Luiz Antonio De Rose, University of Illinois at Urbana-Champaign. Department of Computer Science, 1996 Abstract This thesis addresses the issues of translating an interactive array language such as MATLAB into a traditional compiled language such as Fortran in order to achieve better performance. It describes the main techniques developed for our MATLAB to Fortran 90 compiler to extract information from the high level semantics of MATLAB for the generation of high performance code. To perform the translation, an inference mechanism is necessary to generate the declarations for a typed language to select the appropriate functions and operations and to allocate the necessary space. The inference mechanism developed for this MATLAB to Fortran 90 compiler combines static and dynamic inference methods for intrinsic type shape rank and structural inference. This inference is enhanced with value propagation and symbolic dimension propagation analyses. The experimental results, which compare compiled generated programs with the corresponding interpreted MATLAB execution, show that the compiler can generate code that performs more than 1000 times faster than MATLAB on an SGI Power Challenge and as fast as the corresponding hand written Fortran 90 programs. When compared with the performance of C MEX files generated by the MathWorks MATLAB compiler, we observed that for our tests the Fortran 90 programs ran faster than the corresponding C MEX programs on an SGI Power Challenge and on a Sun SPARCstation 10. This better performance is mainly attributed to our enhanced inference mechanism. **Analysis of Recursive Types in an Imperative Language** Edward Yan-Bing Wang, 1994 Report CS-R, 1984 **IEEE International Conference on Advanced Learning Technologies** IEEE Computer Society, 2001 Focusing on computational intelligence, this text covers topics on architecture of learning technology systems, advanced uses of multimedia and hypermedia, integrated learning environments, application of AI tools in learning technology, and virtual reality. **Journal of Programming Languages**, 1995
