Forestland Investment Bin Mei, Michael L. Clutter, 2023-07-20

Forestland investment has surged in the past few decades as a result of land ownership change in the forestry industry. Timberland investment and management organizations and real estate investment trusts have bought up land and resources that were divested by vertically integrated forest products companies. This book provides a seminal coverage of this seismic shift in the industry, exploring the philosophy, driving factors, valuation theory, research, implementation, practice, and effects of forestland investment. Across 15 chapters, the book reviews the history of forestland investment, discusses the optimal forest rotation, explains timberland appraisal, examines the return drivers of forestland, analyzes timberland index construction methods and results, prices timberland assets, reviews financial and real options, investigates real option values in forestland management, evaluates timber harvest contracts, examines new opportunities in the emerging woody bioenergy market, and eventually offers prospects on forestland investment in the future. It also discusses how forest carbon can be used as a nature-based climate solution. This book is essential reading for forestry business students and scholars, as well as practitioners and policymakers in the industry.
