

## Friction, Gravity, and Momentum (Lessons 5-6) Note-Taking Guide

Using what you learn in **Section 1: Lessons 5-6**, take notes on key concepts by answering the following prompts in your own words.

### 1. Apply gravity and friction in common situations.

#### ▪ Essential Vocabulary

- **Gravity:** an attractive force that acts to pull objects closer to each other.
  - **Newton's Law of Universal Gravitation** states that gravity is inversely proportional to the square of the distance between two objects. Tell you that the distance between two objects has a more significant effect on gravity than the masses of the objects do. When the mass of an object doubles, its gravity doubles. If the distance between two objects doubles, the gravitational force becomes one-fourth of what it was. In other words, changes in distance have a greater effect on gravitational force than changes in mass do.
  - **Friction:** the force that opposes the motion of an object on which it acts. Only exists only when two objects are in direct contact. It is known as contact force. Friction acts to slow down two solid objects that are sliding along each other. When two solid objects that are touching are standing still with respect to each other, friction prevents them from sliding. (fluid resistance exists when an object moves through gas or a liquid.)
  - **Static Friction**
  - **Kinetic Friction**
- Give examples of gravity as a key force in everyday situations.
  - Describe how the force of gravity depends on the mass of a pair of objects and the distance between the objects.

$$Force = \frac{mass_1 \times mass_2}{distance^2}$$
