Renewable Energy Thomas Hammons, 2009-12-01 Renewable Energy is energy generated from natural resources such as sunlight wind rain tides and geothermal heat which are naturally replenished. In 2008 about 18% of global final energy consumption came from renewables with 13% coming from traditional biomass such as wood burning. Hydroelectricity was the next largest renewable source providing 3% 15% of global electricity generation followed by solar hot water heating which contributed with 1 3%. Modern technologies such as geothermal energy wind power solar power and ocean energy together provided some 0 8% of final energy consumption. The book provides a forum for dissemination and exchange of up to date scientific information on theoretical generic and applied areas of knowledge. The topics deal with new devices and circuits for energy systems photovoltaic and solar thermal wind energy systems tidal and wave energy fuel cell systems bio energy and geo energy sustainable energy resources and systems energy storage systems energy market management and economics off grid isolated energy systems energy in transportation systems energy resources for portable electronics intelligent energy power transmission distribution and inter connectors energy efficient utilization environmental issues energy harvesting nanotechnology in energy policy issues on renewable energy building design power electronics in energy conversion new materials for energy resources and RF and magnetic field energy devices.
