**Simulation of a MIMO Communication System in Simulink**, 2007 **International Aerospace Abstracts**, 1999 **Dissertation Abstracts International**, 2008 [Investigation, Design and Implementation of MIMO Antennas for Mobile Phones](#) Muhammad 'Usmān, 2009 The objectives of this work were to investigate design and implement Multiple Input Multiple Output MIMO antenna arrays for mobile phones Several MIMO antennas were developed and tested over various wireless communication frequency bands The radiation performance and

channel capacity of these antennas were computed and measured the results are discussed in the context of the frequency bands of interest A comprehensive study of MIMO antenna configurations such as 2 1 3 1 2 2 and 3 3 using polarisation diversity as proposed for future mobile handsets is presented The channel capacity is investigated and discussed as applying to Rayleigh fading channels with different power spectrum distributions with respect to azimuth and zenith angles The channel capacity of 2 2 and 3 3 MIMO systems using spatial polarisation diversity is presented for different antenna designs The presented results show that the maximum channel capacity for an antenna contained within a small volume can be reached with careful selection of the orthogonal spatial fields The results are also compared against planar array MIMO antenna systems in which the antenna size considered was much larger A 50% antenna size reduction method is explored by applying magnetic wall concept on the symmetry reference of the antenna structure Using this method a triple dual band inverted F antenna system is presented and considered for MIMO application Means of achieving minimum coupling between the three antennas are investigated over the 2 45 GHz and 5 2 GHz bands A new 2 2 MIMO dual band balanced antenna handset intended to minimise the coupling with the handset and human body was proposed developed and tested The antenna coupling with the handset and human hand is reported in terms the radiation performance and the available channel capacity In addition a dual polarisation dipole antenna is proposed intended for use as one of three collocated orthogonal antennas in a polarisation diversity MIMO communication system The antenna actually consists of two overlaid electric and magnetic dipoles such that their radiation patterns are nominally identical but they are cross polarised and hence only interact minimally
