Science And Technology Engineering Session 2:

Distributed Computing and Artificial Intelligence, Special Sessions II, 21st International Conference Goretí Marreiros, Laura Grande, Juan Pedro Llerena, Luís Conceição, Hoon Ko, Marta Plaza, Michela Ricca, 2025-03-11 DCAI 2024 serves as a forum to present applications of innovative techniques for studying and solving complex problems in artificial intelligence and computing. This edition brings together experience, current work, and promising future trends related to distributed computing, artificial intelligence, and their applications to provide efficient solutions to real-world problems. Given the conference's success, this edition features twelve special sessions covering a wide range of topics related to AI and other areas of interest. These sessions were carefully curated to address the latest advancements and challenges in fields such as machine learning, neural networks, IoT, big data, and blockchain, among others. The accepted papers from these sessions are presented in two volumes showcasing the diverse and innovative research being conducted in these domains. This is the first volume which includes the sessions: Advanced AI-based Data Annotation Tools, AI-DAT Digital Heritage Contents, DHC female technopreneurs and early career researchers in distributed computing and AI, organised by the Gendered Innovation Living Labs, GILL: New perspectives and solutions in Cultural Heritage, TECTONIC: Artificial Intelligence trends in Health Care, AIHeC Doctoral Consortia, each focusing on specific themes within the broader scope of AI and its applications. The DCAI 2024 technical program has selected 74 papers in special sessions, and as in past editions, it will be special issues in ranked journals. This symposium is organized by the University of Salamanca, Spain. We would like to thank all the contributing authors, the Program Committee members, National Associations (AEPIA, APPIA, LASI), and the sponsors (AIR Institute, **STEM to Story**, 826 National, 2015-01-07). Bring STEM to life for students with zombies, rockets, celebrities, and more. **STEM to Story**: Enthralling and Effective Lesson Plans for Grades 5-8. Inspires learning through fun, engaging, and meaningful lesson plans that fuse hands-on discovery in science, technology, engineering, and math with STEM and creative writing. The workshop activities within the book are the innovative result of a partnership between 826 National's proven creative writing model and Time Warner Cable's Connect a Million Minds, an initiative dedicated to connecting young people to the wonders of STEM through hands-on learning. Authentically aligned with both the Common Core State Standards and the Next Generation Science Standards, this book provides teachers, after-school and out-of-school providers, and parents with field-tested lessons, workshops, and projects designed by professionals in each field. Including reflective observations by arts and science celebrities like Jon Scieszka, Mayim Bialik, and Steve Hockensmith, lessons feature bonus activities, fun facts, and teaching points for instructors at every level. These quirky, exploratory lessons will effectively awaken student imaginations and passions for both STEM and creative writing, encourage identity with scientific endeavors, and make both science and writing fun. Grades five through eight is the critical period for engaging students in STEM, and this book is designed specifically to appeal to and engage this age group. The guided curricula fosters hands-on discovery, deep learning, and rich inquiry skills.

while feeling more like play than school and has proven popular and effective with both students and teachers Awaken student imagination and get them excited about STEM Fuse creative writing with STEM using hands on activities Make scientific principles relevant to students lives Inspire students to explore STEM topics further The demand for STEM workers is closely linked to global competitiveness and a successful future in STEM depends upon an early introduction to the scientific mindset The challenge for teachers is to break through students preconceptions of STEM fields as hard or boring to show them that STEM is everywhere it s relevant and it s loads of fun For proven lesson plans with just a dash of weird STEM to Story is a dynamic resource adaptable and applicable in school after school and at home
