work which is a small multiple of the operation counts associated with discretizing the system Strategies are reviewed to attain this efficiency by exploiting the factorizability properties inherent to a range of fluid simulations including the compressible Navier Stokes equations factorizability is used to separate the elliptic and hyperbolic factors contributing to the target system each of the factors can then be treated individually and optimally Boundary regions and discontinuities are addressed with separate local treatments New formulations and recent calculations demonstrating the attainment of textbook efficiency for aerodynamic simulations are shown Modeling and Simulation ,1987 **OR/MS Today** ,2002
