Learning to Solve Problems David H. Jonassen, 2010-09-13 This book provides a comprehensive, up-to-date look at problem-solving research and practice over the last fifteen years. The first chapter describes differences in types of problems, individual differences among problem solvers, as well as the domain and context within which a problem is being solved. Part one describes six kinds of problems and the methods required to solve them. Part two goes beyond traditional discussions of case design and introduces six different purposes or functions of cases: the building blocks of problem-solving learning environments. It also describes methods for constructing cases to support problem-solving. Part three introduces a number of cognitive skills required for studying cases and solving problems. Finally, Part four describes several methods for assessing problem-solving. Key features include:

- Teaching Focus: The book is not merely a review of research; it also provides specific, research-based advice on how to design problem-solving learning environments.
- Illustrative Cases: A rich array of cases illustrates how to build problem-solving learning environments.
- Part two introduces six different functions of cases and also describes the parameters of a case.
- Chapter Integration: Key theories and concepts are addressed across chapters, and links to other chapters are made explicit. The idea is to show how different kinds of problems, cases, skills, and assessments are integrated.
