Modeling and Optimization of Optical Communication Networks Chandra Singh, Rathishchandra R. Gatti, K.V.S.S.S.S. Sairam, Ashish Singh, 2023-10-30 *MODELING and OPTIMIZATION of OPTICAL COMMUNICATION NETWORKS* Optical networks are an integral part of many of the technologies that we use every day It is a constantly changing and evolving area with new materials processes and applications coming online almost daily This book provides a basis for discussing open principles methods and research problems in the modeling of optical communication networks It also provides a systematic overview of the state of the art research efforts and potential research directions dealing with optical communication networks It also simultaneously focuses on extending the limits of currently used systems encompassing optical and wireless domains and explores novel research on wireless and optical techniques and systems describing practical implementation activities results and issues A handbook on applications for both academia and industry this exciting new volume includes detailed discussions on real world case studies on trends and emerging technologies associated with modeling of optical communication networks This book also describes several numerical models and algorithms for simulation and optimization of optical communication networks *Modeling and optimization* presents several opportunities for automating operations and introducing intelligent decision making in network planning and in dynamic control and management of network resources including issues like connection establishment self configuration and self optimization through prediction and estimation by utilizing present network state and historical data It focuses on extending the limits of currently used systems encompassing optical and wireless domains and explores the latest developments in applications like photonics high speed communication systems and networks visible light communication nano photonics wireless and MIMO systems *Optimization of Computer Networks* Pablo Pavón Mariño, 2016-03-28 This book covers the design and optimization of computer networks applying a

rigorous optimization methodology applicable to any network technology It is organized into two parts In Part 1 the reader will learn how to model network problems appearing in computer networks as optimization programs and use optimization theory to give insights on them Four problem types are addressed systematically traffic routing capacity dimensioning congestion control and topology design Part 2 targets the design of algorithms that solve network problems like the ones modeled in Part 1 Two main approaches are addressed gradient like algorithms inspiring distributed network protocols that dynamically adapt to the network or cross layer schemes that coordinate the cooperation among protocols and those focusing on the design of heuristic algorithms for long term static network design and planning problems Following a hands on approach the reader will have access to a large set of examples in real life technologies like IP wireless and optical networks Implementations of models and algorithms will be available in the open source Net2Plan tool from which the user will be able to see how the lessons learned take real form in algorithms and reuse or execute them to obtain numerical solutions An accompanying link to the author s own Net2plan software enables readers to produce numerical solutions to a multitude of real life problems in computer networks www.net2plan.com
