Computer Recognition Systems Marek Kurzynski,Edward Puchala,Michal Wozniak,Andrzej

Zolnierrek, 2007-12-13 This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22-25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated

Sensor and Data Fusion Lawrence A. Klein, 2004 This book illustrates the benefits of sensor fusion by considering the characteristics of infrared microwave and millimeter wave sensors including the influence of the atmosphere on their performance Applications that benefit from this technology include vehicular traffic management remote sensing target classification and tracking weather forecasting military and homeland defense Covering data fusion algorithms in detail Klein includes a summary of the information required to implement each of the algorithms discussed and outlines system application scenarios that may limit sensor size but that require high resolution data

Computer Imaging Scott E Umbaugh, 2005-01-27 Computer Imaging Digital Image Analysis and Processing brings together analysis and processing in a unified framework providing a valuable foundation for understanding both computer vision and image processing applications Taking an engineering approach the text integrates theory with a conceptual and application oriented style allowing you to immediately understand how each topic fits into the overall structure of practical application development Divided into five major parts the book begins by introducing the concepts and definitions necessary to understand computer imaging The second part describes image analysis and provides the tools concepts and models required to analyze digital images and develop computer vision applications Part III discusses application areas for the processing of images emphasizing human visual perception Part IV delivers the information required to apply a CVIPtools environment to algorithm development The text concludes with appendices that provide supplemental imaging information and assist with the programming exercises found in each chapter The author presents topics as needed for understanding each practical imaging model being studied This motivates the reader to master the

topics and also makes the book useful as a reference The CVIPtools software integrated throughout the book now in a new Windows version provides practical examples and encourages you to conduct additional exploration via tutorials and programming exercises provided with each chapter

A Heuristic Approach to Possibilistic Clustering: Algorithms and Applications Dmitri A. Viattchenin, 2013-04-17 The present book outlines a new approach to possibilistic clustering in which the sought clustering structure of the set of objects is based directly on the formal definition of fuzzy cluster and the possibilistic memberships are determined directly from the values of the pairwise similarity of objects The proposed approach can be used for solving different classification problems Here some techniques that might be useful at this purpose are outlined including a methodology for constructing a set of labeled objects for a semi supervised clustering algorithm a methodology for reducing analyzed attribute space dimensionality and a methods for asymmetric data processing Moreover a technique for constructing a subset of the most appropriate alternatives for a set of weak fuzzy preference relations which are defined on a universe of alternatives is described in detail and a method for rapidly prototyping the Mamdani s fuzzy inference systems is introduced This book addresses engineers scientists professors students and post graduate students who are interested in and work with fuzzy clustering and its applications
