dynamic behaviour to web pages It is commonly used for client side web development and can also be used for server side development using frameworks like Node js What are the key features of JavaScript Some key features of JavaScript include Dynamic typing Variables can hold values of any data type without explicit declaration Prototype based inheritance Objects can inherit properties and methods from other objects First class functions Functions are treated as first class citizens allowing them to be passed around as arguments and returned from other functions Event driven programming JavaScript is well suited for handling events such as user interactions and asynchronous operations Support for object oriented functional and procedural programming paradigms What are the differences between and in JavaScript The operator checks for equality of values after performing type coercion while the operator checks for strict equality of values without type coercion For example 5 5 evaluates to true because the values are equal after type coercion 5 5 evaluates to false because the values are of different types What is closure in JavaScript A closure is a function that retains access to variables from its parent scope even after the parent function has finished executing Closures are created whenever a function is defined within another function and has access to variables from the outer function s scope Explain the concept of hoisting in JavaScript Hoisting is a JavaScript behaviour where variable and function declarations are moved to the top of their containing scope during the compilation phase This means that variables and functions can be used before they are declared However only the declarations are hoisted not the initializations What are arrow functions in JavaScript Arrow functions are a concise way to write anonymous functions in JavaScript They provide a more compact syntax compared to traditional function expressions and lexically bind this value For example These are just a few examples of JavaScript interview questions Depending on the role and level of expertise required interview questions can cover a wide range of topics including DOM manipulation asynchronous programming ES6 features and more   *300 JavaScript Interview Mastery Questions* Jonathan Middaugh,2020-09-26 This book contains questions covering JavaScript syntax rules functionality and theory It is designed to help you improve upon your JavaScript knowledge as well as expose you to some edge cases and unusual situations in JavaScript I find that these are the types of examples that really solidify a developer s understanding of this fun language The book has a few questions specific to JavaScript running in the browser but most questions are agnostic of environment A few questions also include TypeScript but they will be designated as such The book is organized into 4 tests and the answers to the questions are in the back of the book BONUS Two additional links in the book link to Medium com articles that provide another 50 JavaScript interview questions and 50 TypeScript interview questions Altogether this means 400 interview questions   100+ Common JavaScript Codes E Staff, Normal 0 false false false EN US X NONE X NONE Style Definitions table MsoNormalTable mso style name Table Normal mso tstyle rowband size 0 mso tstyle colband size 0 mso style noshow yes mso style priority 99 mso style qformat yes mso style parent mso padding alt 0in 5 4pt 0in 5 4pt mso para margin top 0in mso para margin right 0in mso para margin bottom 10 0pt mso para margin left 0in line height 115% mso pagination widow
