- (9) Water pump
- (10) Water pump
- (11) Water pump
- (12) Water pump
- (13) Water pump
- (14) Water pump
- (15) Water pump
- (16) Water pump
- (17) engine speed sensor

- (18) Fuel (injector) supply valve
- (19) Vacuum pipe from ESP valve
- (20) ESP solenoid valve electric cable

Disconnect the glow plug electrical connection from the control unit on the engine bay above the battery.

Assembling tappets

Figure 101

Lubricate tappets (1) with oil compatible with operating temperature. Lubricate the camshaft (2) before assembling.

Fit the tappet (1) on camshaft (2) cylinder head and fit camshaft.

Fit cap (3) on tappet supports, making sure that the numbers indicated on caps are turned to the same side as those indicated on cylinder head.

Tighten caps (3) to prescribed torque.

Then tighten caps (3) to prescribed torque.

Figure 102

Fit the tappet (1) together with the shaft into the front cover (2) using the timing device TCT602 (3) and the pin TCT603 (4).

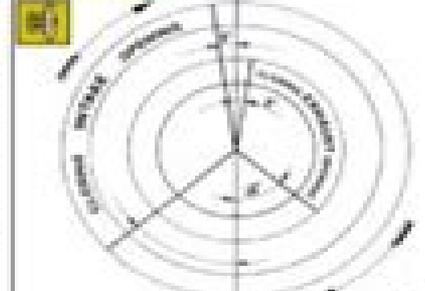

Lubricate the shaft of the tappet.

Insert TCT602 - TCT603 assembly on the mating surface of the front cover (2) and fit to press the cylinder head. Tighten the timing nuts to the prescribed torque.

Remove the cover.

NOTE: The pinning (3) is supplied as a spare together with the shaft. It must not be removed from the timing device front cover (2) to be used later on the cylinder head.

Figure 103

Adjustment of valve tappet clearance must be carried out accurately as it can be altered the required valve gear degree, or could occur if the clearance were greater or less than the prescribed.

In fact, an excessive clearance leads to loss of clear opening and excessive valve timing, while an insufficient clearance causes the opposite effect. Until the clearance is set up the valve should remain a little open with very harmful consequences as far as the life of the valves and seats is concerned.
