Daniel Liang,2011 Introduction to Java Programming Brief 8e consists of the first 20 chapters from the Comprehensive version of Introduction to Java Programming It introduces fundamentals of programming problem solving object oriented programming and GUI programming The Brief version is suitable for a CS1 course Regardless of major students will be able to grasp concepts of problem solving and programming thanks to Liang s fundamentals first approach students learn critical problem solving skills and core constructs before object oriented programming Liang s approach includes application rich programming examples which go beyond the traditional math based problems found in most texts Students are introduced to topics like control statements methods and arrays before learning to create classes Later chapters introduce advanced topics including graphical user interface exception handling I O and data structures Small simple examples demonstrate concepts and techniques while longer examples are presented in case studies with overall discussions and thorough line by line explanations In the Eighth Edition only standard classes are used Improving Software Testing Tim A. Majchrzak,2012-02-03 Software is continuously increasing in complexity Paradigmatic shifts and new development frameworks make it easier to implement software but not to test it Software testing remains to be a topic with many open questions with regard to both technical low level aspects and to the organizational embedding of testing However a desired level of software quality cannot be achieved by either choosing a technical procedure or by optimizing testing processes In fact it requires a holistic approach This Brief summarizes the current knowledge of software testing and introduces three current research approaches The base of knowledge is presented comprehensively in scope but concise in length thereby the volume can be used as a reference Research is highlighted from different points of view Firstly progress on developing a tool for automated test case generation TCG based on a program s structure is introduced Secondly results from a project with industry partners on testing best practices are highlighted Thirdly embedding testing into e assessment of programming exercises is described **Where Parallels Intersect** Eli Cohen, ECEL2006-5th European Conference on e-Learning ,
