Principles of Development Lewis Wolpert, Cheryll Tickle, Alfonso Martínez Arias, 2015 Developmental biology is at the core of all biology. This text emphasises the principles and key developments in order to provide an approach and style that will appeal to students at all levels. *Principles of Development* Lewis Wolpert, Cheryll Tickle, 2011-01-27 Principles of Development reveals the universal principles that govern the process of development illustrating how a highly complex living organism forms from just a single fertilized egg. *Principles of Development* Lewis Wolpert, 2007 The process of biological development is an amazing feat of tightly regulated cellular growth and patterning powerful enough to result in the emergence of a highly complex living organism from just a single fertilized egg. But how does biological development occur? How can a single fertilized egg give rise to the limbs, organs and other tissues that comprise a living organism? Principles of Development reveals the universal principles which govern the process of development. Written by one of the most influential developmental biologists of our time, Lewis Wolpert, it focuses on those systems that best illuminate common principles, demystifying the complex yet intricate processes through which biological development occurs. With co-authors whose expertise span the discipline, Principles of Development combines a careful exposition of the subject with insights from some of the world's pioneering developmental biology researchers, taking the student from the fundamental through to latest discoveries in the field. Assuming no prior knowledge of the subject and delivered in the lucid, engaging style for which Wolpert is renowned, Principles of Development is an invaluable resource for all students encountering this fascinating subject for the first time and for the duration of their studies. Online resource centre, Lecturer resources, Illustrations from the book available to download to facilitate lecture preparation, PowerPoint course outlines to facilitate lecture preparation, Student resources, Multiple choice questions for students to check their understanding, Concept questions for students to explore their understanding of the key principles, Study Guide for each chapter containing chapter overview, study tip and key words, Web links to further information resources including web-based exercises to encourage independent learning.

Towards a Theory of Development Alessandro Minelli, Thomas Pradeu, 2014-05-01 Is it possible to explain and predict the development of living things What is development Articulate answers to these seemingly innocuous questions are far from straightforward To date no systematic targeted effort has been made to construct a unifying theory of development This novel work offers a unique exploration of the foundations of ontogeny by asking how the development of living things should be understood It explores the key concepts of developmental biology asks whether general principles of development can be discovered and examines the role of models and theories The two editors one a biologist with long interest in the theoretical aspects of his discipline the other a philosopher of science who has mainly worked on biological systems have assembled a team of leading contributors who are representative of the scientific and philosophical community within which a diversity of thoughts are growing and out of which a theory of development may eventually emerge They analyse a wealth of approaches

to concepts models and theories of development such as gene regulatory networks accounts based on systems biology and on physics of soft matter the different articulations of evolution and development symbiont induced development as well as the widely discussed concepts of positional information and morphogenetic field the idea of a programme of development and its critiques and the long standing opposition between preformationist and epigenetic conceptions of development Towards a Theory of Development is primarily aimed at students and researchers in the fields of evo devo developmental biology theoretical biology systems biology biophysics and the philosophy of science
