Contexts of Learning Mathematics and Science Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement
