## **Mathematics In Daily Life:**

The Mathematics of Everyday Life Alfred S. Posamentier, Christian Spreitzer, 2018-08-21 Two experienced math educators help the average reader discover not only the everyday usefulness of math but the fun that comes from mastering the basics of arithmetic algebra geometry and more If you think of mathematics as a series of pointless classroom exercises without much relevance to real life this book will change your mind As the authors show math is deeply embedded in almost every aspect of daily life from managing your personal finances making consumer purchases and sharpening your computational skills to learning to apply mathematical concepts that will give you a better grasp of both ordinary and extraordinary events and help you better appreciate the world we live in With some basic geometry under your belt you ll discover that there is an optimal point on a soccer field from which to shoot a goal And you ll be more clever with the gears of a bike If you like to play cards or go to the casino knowing something about probability will give you an edge You ll also have an enhanced understanding of the whispering effect inside the Capitol rotunda why a car s headlights are so bright and even why sewer covers are round After reading this entertaining and instructive book you ll come away with a whole new awareness of how elegantly mathematics explains everyday experiences and observations from present day items to classical art and architecture

**Mathematics in Life and Thought** Andrew Russell Forsyth, 1929      Mathematics and the Real World Zvi

Artstein,2014 In this accessible and illuminating study of how the science of mathematics developed a veteran math researcher and educator looks at the ways in which our evolutionary makeup is both a help and a hindrance to the study of math Artstein chronicles the discovery of important mathematical connections between mathematics and the real world from ancient times to the present The author then describes some of the contemporary applications of mathematics in probability theory in the study of human behavior and in combination with computers which give mathematics unprecedented power The author concludes with an insightful discussion of why mathematics for most people is so frustrating He argues that the rigorous logical structure of math goes against the grain of our predisposed ways of thinking as shaped by evolution presumably because the talent needed to cope with logical mathematics gave the human race as a whole no evolutionary advantage With this in mind he offers ways to overcome these innate impediments in the teaching of math
